

TEXAS FACT SHEET

AAFP on Children's Health Insurance Program

The AAFP promotes and supports a safe and nurturing environment for all children that includes access to comprehensive medical, dental and mental health care, psychological and legal security and does not discriminate on the basis of adoption, foster care, religion, sexual orientation, or gender identity. Every family physician is trained to, and has provided, care for children. In 2016, more than 80% of family physicians reported providing care for adolescents, and 73% reported caring for infants and children. Close to one-third of family physicians also provide care for newborns and infants, and many deliver babies in their communities.¹ AAFP has a major stake in ensuring the viability of the Children's Health Insurance Program (CHIP) and Medicaid, which serves almost seven times as many poor and disabled children as CHIP. The AAFP urges Congress to enact a long-term funding extension of CHIP to keep both programs strong and foster stability to low income children and families.

Texas Family Medicine

- There are 8,147 AAFP members in Texas.²
- Texas has 32 family medicine residency programs.
- Texas has 316 medically underserved areas/populations.
- 3.8% of the residents in Texas live in a health professional shortage area.

Children's Health Insurance Program in Texas

- Texas operates a separate [Children's Health Insurance Program](#).
- 4,610,610 children are covered by Medicaid and CHIP in Texas:
 - 3,535,398 children received CHIP-funded coverage
 - 1,075,212 received Medicaid-funded coverage³
- In 2015, there were 682,000 uninsured children in Texas.⁴
- CHIP in Texas covers children ages 0-18 from 133% - 201% of FPL.⁵
- Cost sharing is associated with CHIP in Texas; it begins at 133% of FPL.⁶
- Texas is expected to exhaust federal CHIP funds by April 2018 if Congress does not reauthorize the program.⁷

Medicaid/Medicare Parity

- The increase in Medicaid payment to 100% of Medicare for primary care services improved access to care among family physicians taking Medicaid by 7.7%.⁸
- AAFP's [Core Principles of Medicaid](#) supports payment for primary care services that are at least equal to Medicare's payment rate.
- Acceptance of new Medicaid patients among AAFP members is at an all-time high of 69%.
- Texas did not continue Medicaid/Medicare Parity after the program ended in December 2014. Texas Medicaid paid physicians only 58% of the Medicare payment for the same service in 2016.⁹

Teaching Health Centers

- The AAFP supports [teaching health centers](#) (THCs) reauthorization legislation, [HR 3394](#) and [S 1754](#), the *Training the Next Generation of Primary Care Doctors Act of 2017*, as a critical program to increase the number of primary care physicians.
- The Teaching Health Center Graduate Medical Education (THCGME) program also addresses the regional primary care physician shortage, particularly within rural and underserved communities.
- There is one teaching health center graduate medical education program in Conroe, Texas.
 - [Lone Star Community Health Center, Inc.](#) has a residency program in family medicine and received \$714,735 in federal THCGME support.
 - During 2016-2017, there were 9 full-time equivalents.¹⁰
- Residents trained in THCs are well prepared for primary care practice in community settings, and data show that training in underserved communities increases the likelihood that these residents will choose to practice in similar settings upon graduation.¹¹ In addition, graduates of THCs are more likely to work in safety net clinics than residents who did not train in these centers.¹²

National Health Service Corps

- The AAFP advocates for the reauthorization of funding for the [National Health Service Corps](#) (NHSC) which is vital to promoting access to family physicians in health professions shortage areas throughout the nation.
- In Texas, the National Health Service Corps supports nearly 176 full-time clinicians.
 - Of those, 159 are in the NHSC loan repayment program.
 - 81 of the Texas NHSC placements are in primary health care.¹³
- The NHSC helps bring health care to those who need it most. Today, 10,400 NHSC members provide culturally competent care to more than 11 million people.¹⁴
