

## Asthma Pretest

1. First line maintenance therapy for mild persistent asthma is which ONE of the following:
  - a. Short acting beta agonists (SABA)
  - b. Long acting beta agonists (LABA)
  - c. Oral Prednisone
  - d. Inhaled corticosteroids (ICS)
  - e. Leukotriene receptor antagonists (LRA)
  
2. Which of the following are treatments of acute asthma exacerbations in the clinic/urgent care/ER setting? Circle ALL that apply:
  - a. Short acting beta agonists (SABA)
  - b. Long acting beta agonists (LABA)
  - c. Ipratropium bromide
  - d. Inhaled corticosteroid
  - e. Systemic steroids
  
3. First line treatments for exercise induced bronchoconstriction (EIB) include which of the following? Circle ALL that apply:
  - a. Short acting beta agonists (SABA)
  - b. Long acting beta agonists (LABA)
  - c. Cromolyn
  - d. Ipratropium bromide
  - e. Leukotriene receptor antagonists (LRA)
  
4. Which of the following has been proven to prevent asthma and/or asthma exacerbations? Circle ALL that apply:
  - a. Influenza vaccine
  - b. Probiotics
  - c. Vitamin C
  - d. Caffeine
  - e. None of the above
  - f. All of the above
  
5. Asthma exacerbations should be treated the same regardless of pregnancy status.
  - a. True
  - b. False
  
6. Budesonide is the preferred ICS in pregnancy.
  - a. True
  - b. False
