Introducing a One-Page Adult Preventive Health Care Schedule: USPSTF Recommendations at a Glance

PAUL F. SWENSON, MD, El Rio Community Health Center, Tucson, Arizona
MARK H. EBELL, MD, MS, University of Georgia College of Public Health, Athens, Georgia

The U.S. Preventive Services Task Force (USPSTF) is an independent voluntary panel of experts in primary care, prevention, and evidence-based practice. As of April 2016, the USPSTF has recommendation statements for more than 80 active topics, most of which are endorsed by the American Academy of Family Physicians. Its process has been recognized by the Institute of Medicine as a model for development of evidence-based practice guidelines.

However, numerous barriers exist to implementing these guidelines, including knowledge, time, insurance, and social barriers. For example, knowledge of USPSTF colorectal cancer screening components ranged from 22% to 53% in first- through third-year medical residents. One recent survey from the Centers for Disease Control and Prevention (CDC) found significant gaps in physicians’ knowledge regarding the value of screening tests for ovarian and colorectal cancer. Another survey found significant levels of nonadherence to USPSTF recommendations, including beginning cervical cancer screening too early, continuing it too long, and performing it annually rather than every three years as recommended.

In addition, recommendations for behavioral counseling are often not implemented. For example, counseling for tobacco cessation was documented in only 21% of visits in which tobacco use was documented. This gap between guideline recommendations and actual practice has the potential to worsen as recommendations become more complex, vary by age group, and increasingly require risk assessment, as with recommendations for mammography, breast cancer chemoprevention, screening for the BRCA gene mutation, and screening for hepatitis B and C virus infections.

With the passage of the Affordable Care Act in 2010, the USPSTF guidelines have taken on new significance. Specifically, grade A and B recommendations must be covered without cost-sharing requirements for patients in nongrandfathered insurance plans. Currently, several resources are available to help physicians understand and implement recommendations:

- USPSTF website (http://www.uspreventiveservicestaskforce.org): a web-based resource of all active and inactive recommendations, as well as those referring to another organization, such as the CDC.

Although these resources are helpful, there has been no concise visual representation of USPSTF recommendations as there is for immunization recommendations (http://www.cdc.gov/vaccines/schedules/hcp/adult.html#print). The goals of such a schedule are the following:

- Simplicity (excludes childhood and pregnancy-related topics)
- Familiarity (such as a visual format similar to the CDC vaccine schedule)
- Concise presentation
- Informative
- Easily disseminated

Shown on page 740, the Adult Preventive Health Care Schedule meets these criteria. Although it is not everything a family physician needs to know about screening and prevention, it provides a practical clinical aid. We hope this helps physicians bridge some...
of the knowledge gaps of USPSTF recommendations and apply them to their practice.

EDITOR’S NOTE: The authors will periodically update the online version of this table and supporting documents throughout the year to make it as current a resource as possible. We plan to run an updated version of this table once a year, similar to the annual immunization schedules. In the online PDF, note that there are links in the main table’s risk factors to mini-tables showing what those risk factors are.

Dr. Ebell is Deputy Editor for Evidence-Based Medicine for AFP, and a member of the USPSTF. This editorial and accompanying figure were produced independently of the USPSTF and do not necessarily represent the views and policies of the USPSTF.

Dr. Swenson developed the original version of the preventive schedule with coauthors Coya Lindberg, Cynthia Carillo, MD, and Joshua Clutter, MD, as a resident at the University of Arizona.

| Hepatitis B virus infection
| (B) if at increased risk | | | | | | | | | | | | | | |
| Syphilis
| (A) if at increased risk | | | | | | | | | | | | | | |
| Tuberculosis
| (B) if at increased risk | | | | | | | | | | | | | | |
| BRCA gene screening
| (B) if appropriate family history | | | | | | | | | | | | | | |
| Chlamydia and gonorrhea
| (B) if sexually active | (B) if at increased risk | | | | | | | | | | | | | |
| Intimate partner violence
| (B) childbearing-aged women | | | | | | | | | | | | | | |
| Cervical cancer
| (A) Pap smear every 3 years, or every 5 years with human papillomavirus cotesting starting at age 30 | | | | | | | | | | | | | | |
| Abnormal glucose/diabetes
| (B) if overweight or obese | | | | | | | | | | | | | | |
| Hepatitis C virus infection
| (B) if high risk | (B) birth years 1945-1965 | (B) if at high risk | | | | | | | | | | | | |
| Colorectal cancer
| (A) | | | | | | | | | | | | | | |
| Breast cancer
| (B) biennial screening | | | | | | | | | | | | | | |
| Lung cancer
| (B) if 30 pack-years and current or former smoker (quit in past 15 years) | | | | | | | | | | | | | | |
| Osteoporosis
| (B) if ≥ 9.3% 10-year fracture risk | | | | | | | | | | | | | | |
| Abdominal aortic aneurysm
| (B) if an "ever smoker" | | | | | | | | | | | | | | |
| **USPSTF preventive medications recommendations** | | | | | | | | | | | | | | | |
| Primary prevention breast cancer
| (B) if at increased risk and only after shared decision making | | | | | | | | | | | | | | |
| Folic acid supplementation
| (A) if capable of conceiving | | | | | | | | | | | | | | |
| Statins for primary prevention of CVD
| (B) see criteria on p. 6 | | | | | | | | | | | | | | |
| Aspirin for primary prevention of CVD and colorectal cancer
| (B) if ≥ 10% 10-year CVD risk | | | | | | | | | | | | | | |
| Fall prevention (vitamin D)
| (B) if community dwelling and increased fall risk | | | | | | | | | | | | | | |
| **USPSTF counseling recommendations** | | | | | | | | | | | | | | | |
| Sexually transmitted infection prevention
| (B) if at increased risk | | | | | | | | | | | | | | |
| Diet/activity for CVD prevention
| (B) if overweight or obese and with additional CVD risk | | | | | | | | | | | | | | |
| Skin cancer prevention
| (B) if fair skinned | | | | | | | | | | | | | | |

**Legend**

- **Normal risk**
- **With specific risk factor**

**Recommendation grades**

- A: Recommended (likely significant benefit)
- B: Recommended (likely moderate benefit)
- C: Do not use routinely (benefit is likely small)
- D: Recommended against (likely harm or no benefit)
- I: Insufficient evidence to recommend for or against

**CHD = coronary heart disease; CVD = cardiovascular disease; HIV = human immunodeficiency virus; USPSTF = U.S. Preventive Services Task Force.**

Visual adaptation from recommendation statements by Swenson PF, Lindberg C, Carrilo C, and Clutter J.
**BRCA MUTATION RISK FACTORS**

Family history of breast cancer:
- Bilateral
- Diagnosed before 50 years of age
- Diagnosed in multiple family members
- In one or more male family members
- With a family history of ovarian cancer
- Family member with two BRCA-related cancers

**NOTE:** Consider use of validated risk assessment tools to identify patients with pertinent family history.

**HIV RISK FACTORS**

- IV drug use
- Men who have sex with men
- Other STI
- Requesting STI testing
- Sex exchanged for drugs or money

- Sex with individuals who are IV drug users, bisexual, or HIV positive
- Unprotected sex, including anal intercourse

**HEPATITIS B INFECTION RISK FACTORS**

- Human immunodeficiency virus infection
- Infected sex partner
- Intravenous drug use
- Living with an infected individual

**HEPATITIS C INFECTION RISK FACTORS**

- Blood transfusion before 1992
- Chronic hemodialysis
- High-risk sexual behaviors
- Incarceration
- Intravenous or intranasal drug use
- Maternal infection (concern for vertical transmission)
- Unregulated tattoo

**SYPHILIS RISK FACTORS**

- High-risk sexual behaviors
- Incarceration
- Local prevalence

**TUBERCULOSIS RISK FACTORS**

- Health professionals*
- Homelessness, including former
- Immunosuppression*

- Prisoners, including former
- Residents of high-risk regions, including former

- Evidence for screening not reviewed by the USPSTF because this is standard practice in public health and standard of care for patients with immunosuppression, respectively.

**CARDIOVASCULAR DISEASE RISK FACTORS**

- Diabetes mellitus
- Dyslipidemia
- Family history
- Hypertension

**CHLAMYDIA AND GONORRHEA RISK FACTORS**

- New or multiple sex partners
- Other STI, including history of STI
- Partner with STI
- Partners who have multiple sex partners

- Sex exchanged for drugs or money
- Sexually active adolescents
- Unprotected sex or inconsistent condom use

**BREAST CANCER RISK FACTORS**

- Consider use of a risk-assessment model for patients with a history of biopsy or positive family history

**SEXUALLY TRANSMITTED INFECTION RISK FACTORS**

- Similar to those risk factors listed previously for sexually transmitted infections; consider local and population-based prevalence in individual risk assessment

**HEPATITIS B INFECTION RISK FACTORS**

- Men who have sex with men
- Origin from regions* with prevalence ≥ 2%
- U.S.-born children of immigrants from regions* with prevalence ≥ 8%, if unvaccinated

*—Risk of regions can be found at http://www.cdc.gov/mmwr/preview/mmwrhtml/rr5708a1.htm.

**HEPATITIS C INFECTION RISK FACTORS**

- Men who have sex with men
- Sex exchanged for money for drugs

**SYPHILIS RISK FACTORS**

- Men who have sex with men
- Sex exchanged for money for drugs

**TUBERCULOSIS RISK FACTORS**

- Prisoners, including former
- Residents of high-risk regions, including former

**CARDIOVASCULAR DISEASE RISK FACTORS**

- Metabolic syndrome
- Obesity
- Tobacco use

**CHLAMYDIA AND GONORRHEA RISK FACTORS**

- New or multiple sex partners
- Other STI, including history of STI
- Partner with STI
- Partners who have multiple sex partners

**BREAST CANCER RISK FACTORS**

- Consider use of a risk-assessment model for patients with a history of biopsy or positive family history

**SEXUALLY TRANSMITTED INFECTION RISK FACTORS**

- Similar to those risk factors listed previously for sexually transmitted infections; consider local and population-based prevalence in individual risk assessment
## Adult Preventive Health Care Schedule: Recommendations from the USPSTF

### Grade A/B Recommendations (with Associated Grade C/D/I Recommendations):

#### Alcohol misuse screening
- **(I)** IETRFOA

- **(A)** Screen adults and provide brief behavioral interventions for risky alcohol use

#### Depression screening
- **(I)** IETRFOA

- **(B)** Screen adults with systems for evaluation and management

#### Hypertension screening
- **(A)** Screen adults; exclude white coat hypertension before starting therapy

#### Obesity screening
- **(I)** IETRFOA

- **(B)** Screen adults and offer or refer patients with body mass index ≥ 30 kg per m² to intensive behavioral interventions

#### Tobacco use screening
- **(A)** Screen adults and provide behavioral and U.S. Food and Drug Administration–approved intervention therapy for cessation

#### Human immunodeficiency virus screening
- **(A)** Screen individuals 15 to 65 years of age

- **(B)** Screen older and younger persons who are at increased risk

#### Hepatitis B virus infection screening
- **(B)** Screen adolescents and adults at high risk

#### Syphilis screening
- **(A)** Screen individuals at increased risk

#### Tuberculosis screening
- **(B)** Screen individuals at increased risk

#### BRCA screening
- **(A)** Screen women with appropriate family history

- **(B)** Recommend against screening patients without appropriate family history

#### Chlamydia and gonorrhea screening
- **(A)** Screen sexually active women 24 years and younger, and women at increased risk who are 25 years and older

- **(I)** IETRFOA

#### Intimate partner violence screening
- **(A)** Screen women of childbearing age and refer to appropriate services

- **(I)** IETRFOA

#### Cervical cancer screening
- **(A)** Screen women 21 to 65 years of age

  - Focalabolaou smear every three years

  - Women 30 to 65 years of age may increase screening interval to five years with cytology and human papillomavirus cotesting

- **(D)** Recommend against screening in women

  - Age 20 years and younger

  - Older than 65 years if adequately screened previously and no increased risk of cervical cancer

  - With hysterectomy (including cervix) without history of cervical intraepithelial neoplasia grade 2 or 3 or cervical cancer

  - Younger than 30 years with human papillomavirus testing alone or in combination with cytology

### Abnormal glucose and diabetes mellitus type 2 screening
- **(B)** Screen overweight or obese adults 40 to 70 years of age and refer patients with abnormal glucose levels for intensive counseling for healthy diet and exercise

#### Hepatitis C virus infection screening
- **(B)** Offer one-time screening of patients born between 1945 and 1965

#### Colorectal cancer screening
- **(A)** Screen patients 50 to 75 years of age with fecal occult blood (or immunochemical) test, sigmoidoscopy, colonoscopy, computed tomography colonography, or multtargeted stool DNA test

- **(C)** Recommend against routine screening of patients 76 to 85 years of age

#### Breast cancer screening
- **(B)** Biennial screening mammography in women 50 to 74 years of age

- **(C)** Screening is an individualized decision for women 40 to 49 years of age

- **(I)** IETRFOA

  - Mammography after 75 years of age

  - Screening with digital breast tomosynthesis

  - Adjunctive screening in women with dense breast tissue and negative screening mammogram

#### Lung cancer screening
- **(B)** Screen annually with low-dose computed tomography for individuals 55 to 80 years of age with a 30 pack-year history who currently smoke or quit within the past 15 years; consider overall health in decision to screen

#### Osteoporosis screening
- **(B)** Screen women 65 years and older

- **(B)** Screen women if fracture risk equal to that of a 65-year-old white woman without other risk factors (9.3% in 10 years by U.S. FRAX [Fracture Risk Assessment] tool)

- **(I)** IETRFOA

#### Abdominal aortic aneurysm screening
- **(B)** Screen men 65 to 75 years of age who ever smoked (100 or greater lifetime cigarettes) with one-time abdominal aortic aneurysm ultrasonography

- **(C)** Recommend selective screening of never-smoking men 65 to 75 years of age

- **(I)** IETRFOA

#### Primary prevention of breast cancer
- **(B)** Recommend shared decision making for medications (such as tamoxifen and raloxifene) that reduce risk of breast cancer in women at increased risk

- **(D)** Recommend against routine use if no increased risk

#### Folic acid supplementation
- **(A)** 0.4 to 0.8 mg daily for women capable of conception

---

**CHD = coronary heart disease; CVD = cardiovascular disease; IETRFOA = insufficient evidence to recommend for or against; UIP = update in progress; USPSTF = U.S. Preventive Services Task Force.**

---

**Continues**
### Grade A/B Recommendations (with Associated Grade C/D/I Recommendations): (continued)

**Statins for primary prevention of CVD**

(B) Recommend low- to moderate-dose statin therapy in patients meeting all three criteria:
- (1) 40 to 75 years of age
- (2) Dyslipidemia, diabetes, hypertension, or smoker
- (3) 10-year CVD risk of 10% or greater

(C) Consider low- to moderate-dose statin therapy in appropriate candidates meeting the first two criteria but with a 10-year CVD risk of 7.5% to 10%

(I) IETRFOA initiating statin therapy after 75 years of age for primary prevention

**Aspirin for primary prevention of CVD and colorectal cancer**

(B) Recommend low-dose aspirin for patients 50 to 59 years of age with a 10-year CVD risk of 10% or greater, appropriate bleeding risk, and life expectancy of at least 10 years

(C) Recommend individualized decision making for patients 60 to 69 years of age who meet the same criteria

(I) IETRFOA low-dose aspirin for patients younger than 50 years or 70 years or older

**Fall prevention in older adults**

(B) Recommend exercise or physical therapy and vitamin D supplementation for fall prevention in community-dwelling individuals 65 years and older at increased risk of falls

(C) Recommend against automatic comprehensive screening for fall risk in community-dwelling older adults

**Counseling to prevent sexually transmitted infection**

(B) Recommend counseling to prevent sexually transmitted infection for adolescents and adults at increased risk

**Counseling to promote healthy diet and physical activity**

(B) Recommend that overweight or obese patients with other CVD risk factor(s) be offered or referred for intensive behavioral counseling

**Counseling for skin cancer prevention**

(B) Recommend counseling fair-skinned patients 10 to 24 years of age about minimizing ultraviolet light exposure

(I) IETRFOA counseling individuals older then 24 years about reducing risk of skin cancer

### Grade C Recommendations:

- Physical activity and healthy diet counseling to reduce cardiovascular risk in adults without obesity or known CVD risk factors

### Grade D Recommendations:

- Bacteriuria (asymptomatic) screening in men and nonpregnant women

- Beta carotene or vitamin E supplementation for CVD or cancer risk reduction

- Carotid artery stenosis screening

---

**CHD** = coronary heart disease; **CVD** = cardiovascular disease; **IETRFOA** = insufficient evidence to recommend for or against; **UIP** = update in progress; **USPSTF** = U.S. Preventive Services Task Force.
