

Peer Reviewers Help *AFP* Maintain the Highest Quality

JOYCE A. MERRIMAN

The peer review process used by most respected medical journals like *AFP* is designed to ensure the journal brings high-quality, unbiased content to readers. *AFP* relies on the expertise and generous contributions of many peer reviewers who help spot weaknesses in manuscripts and improve their educational value.

Reviewers provide detailed comments about each manuscript's clarity, its accuracy, its authoritativeness, and its documentation of a comprehensive, evidence-based approach to the subject. They review manuscripts using a detailed checklist. Reviewers are asked to identify references, tables, figures, and information about new developments that should be added or updated. They also evaluate the manuscript for appropriate balance and identify any apparent conflict of interest or bias.

Our process is double blinded, meaning that authors are not told who their reviewers are, and reviewers are not given information about the authors of the manuscripts they review. We believe this process produces the most helpful reviews and ultimately leads to better articles.

Each manuscript considered for publication in *AFP* is

sent to several peer reviewers, including at least two family physicians and two physicians, who may be family physicians or other specialists, chosen for their expertise in the subject matter of the article. Reviewers methodically evaluate the manuscript, which often requires hours of research and effort.

The *AFP* peer reviewers are volunteers; they are not paid for the substantial time reviews may require, although those who are members of the AAFP may receive continuing medical education Prescribed credit for each review. The AAFP allows reviewers up to 3 Prescribed credits for each manuscript review they provide (maximum of 15 credits per three-year cycle). To report credit earned, reviewers can log in to the members section of the Web site at <http://www.aafp.org/CME/reporting/ClaimCredit.aspx> and complete the online form. If you would like to serve as a peer reviewer for *AFP*, please e-mail a note of interest to afpjournal@georgetown.edu.

We thank the reviewers listed below, each of whom reviewed at least one manuscript between July 1, 2009, and Dec. 31, 2010. Without them, *AFP* wouldn't be the high-quality journal it is. ■
