

# Primary Care for the 21st Century

Ensuring a Quality, Physician-led Team for Every Patient

The U.S. is moving to a new primary care model built around patients and delivered by teams, known as the **Patient-Centered Medical Home (PCMH)**.

## What is it?

- Each person has an ongoing relationship with a **personal physician** who provides continuous, comprehensive care
- **Physician leads a team** of professionals to care for patients

- Personal physician **coordinates with other health care providers within the PCMH** and across the complex health care system

- **Quality and safety** are hallmarks, and patients and their families actively participate in decision making

- **Enhanced access to care** through open and same-day scheduling, expanded clinical hours, and new options for communication

## Can a nurse lead the team?

Nurses are vital members of the team, but **nurse ≠ doctor**

### Years of Education and Training<sup>1</sup>

Doctors bring broader and deeper expertise to the diagnosis and treatment of all health problems. Doctors are trained to provide complex diagnoses and develop comprehensive plans to treat them.

*3 out of 4*

patients prefer to be treated by a physician even if it takes longer to get an appointment and even if it costs more.<sup>2</sup>

## Why do we need it?

- **Fewer** emergency room visits
- **Fewer** hospital admissions and readmissions
- **Shorter** hospital stays<sup>3</sup>

## How do we make the PCMH a reality for everyone?

### 1 We have to fix the primary care workforce shortage.

**45,000** too few primary care **physicians** by 2020<sup>4</sup>

AND

**260,000** too few registered **nurses** by 2025<sup>5</sup>

### 2 We need more doctors, and we need more nurses, and we need them working together in teams.

Studies show the ideal practice ratio of nurse practitioners to physicians is approximately **4 to 1**.<sup>6</sup> At this ratio, everyone can have a physician-led team, and the primary care shortage can be eliminated.

### 3 How can we train more primary care doctors?

- Increase federal funding for primary care physician education.

- Help medical students pay back or defray medical school debt.

- Improve primary care physician payment so students will consider primary care careers.
