March 25, 2021

The Honorable Patrick Leahy Chairman Committee on Appropriations U.S. Senate Washington, DC 20510

The Honorable Patty Murray Chair Subcommittee on Labor, Health and Human Services, Education, and Related Agencies U.S. Senate Washington, DC 20510 The Honorable Richard Shelby Vice Chairman Committee on Appropriations U.S. Senate Washington, DC 20510

The Honorable Roy Blunt Ranking Member Subcommittee on Labor, Health and Human Services, Education, and Related Agencies U.S. Senate Washington, D.C. 20510

Dear Chairman Leahy, Vice Chairman Shelby, Chair Murray, and Ranking Member Blunt:

As you consider appropriations for Fiscal Year (FY) 2022, the undersigned 202 national, state, and local medical, public health, and research organizations write to ask you to provide \$50 million in funding shared evenly between the U.S. Centers for Disease Control and Prevention (CDC) and the National Institutes of Health (NIH) to conduct public health research into firearm morbidity and mortality prevention.

In the midst of the COVID-19 pandemic, communities across the U.S. continue to suffer from the public health crisis of firearm-related injuries and deaths. In 2019, the most recent year for which we have data, firearm-related injuries led to 39,707 fatalities. A public health approach to firearm violence prevention is urgently needed to promote health equity and address the disproportionate burden of this epidemic on communities of color. The foundation of this approach is rigorous research that can accurately quantify and describe the facets of an issue and identify opportunities for reducing its related morbidity and mortality.

We would like to thank Congress for providing \$25 million for this public health research to the CDC and NIH in FY20 and for continuing this funding in the *Consolidated Appropriations Act* for FY 2021. This initial investment was a crucial step toward applying a public health approach to increasing gun safety and reducing firearm-related injuries and deaths, and we are excited to see these funds contributing to important research projects that are now underway. The CDC has made 18 awards for two- and three-year projects to improve scientific understanding of firearm-related violence and to rigorously evaluate the effectiveness of prevention strategies.ⁱⁱ The NIH is funding research on the determinants of firearm injury, the identification of those at risk, and the evaluation of innovative interventions.ⁱⁱⁱ These projects will advance our knowledge of how to keep communities safe, with some researchers focusing on particular groups such as U.S. Army soldiers and veterans, children, and residents of rural and urban areas.

This initial investment is important, but increased funding is still needed to overcome the decades-long lack of federal funding that set back our nation's response to the public health issue of firearm-related morbidity and mortality. Over time, additional funding can generate research into important issues such as the best ways to prevent unintended firearm injuries and fatalities among women and children; the most effective methods to prevent firearm-related suicides; the

measures that can best prevent the next shooting at a school or public place; and numerous other vital public health questions. Continued and expanded investments are essential to the success of this important work.

Our groups strongly urge the Senate to increase funding to the CDC and NIH for firearm morbidity and mortality prevention research to a total of \$50 million as part of FY 2022 appropriations. Continued and expanded funding could support the creation of additional, large, multi-year studies and accelerate the rebuilding of a research community that shrank in the decades before Congress restored this federal funding. Robust and sustained research on motor vehicle crashes and subsequent legislation has helped save hundreds of thousands of lives through public health interventions, including seat belts and other safety features. The same approach can help reduce firearm-related injuries in our communities, including ensuring that the CDC and NIH are able to adequately fund non-biased, evidence-based research into this public health priority.

Our organizations stand ready to work with you to support this critical effort. Thank you for your consideration.

Sincerely,
