IMPORTANT SAFETY INFORMATION FOR FLUZONE QUADRIVALENT, FLUZONE INTRADERMAL QUADRIVALENT, AND FLUZONE HIGH-DOSE VACCINES

Fluzone Quadrivalent, Fluzone Intradermal Quadrivalent, and Fluzone High-Dose vaccines should not be administered to anyone with a known hypersensitivity (eg, anaphylaxis) to any vaccine component, including egg protein or thimerosal (the multidose vial is the only presentation containing thimerosal), or to a previous dose of any influenza vaccine.

If Guillain-Barré syndrome has occurred within 6 weeks following previous influenza vaccination, the decision to give Fluzone Quadrivalent, Fluzone Intradermal Quadrivalent, or Fluzone High-Dose vaccine should be based on careful consideration of the potential benefits and risks.

The most common local and systemic adverse reactions to Fluzone Quadrivalent, Fluzone Intradermal Quadrivalent, and Fluzone High-Dose vaccines include pain and swelling at the injection site (also pruritus at the injection site and shivering in adults receiving Fluzone Intradermal Quadrivalent vaccine); myalgia, malaise, and headache (also irritability, abnormal crying, drowsiness, appetite loss, vomiting, and fever in young children receiving Fluzone Quadrivalent vaccine). Pruritus, erythema, swelling, and induration at the injection site have occurred more frequently with intradermal vaccination than with intramuscular vaccination. Other adverse reactions may occur. Vaccination with Fluzone Quadrivalent, Fluzone Intradermal Quadrivalent, or Fluzone High-Dose vaccine may not protect all individuals.

INDICATION FOR FLUZONE QUADRIVALENT, FLUZONE INTRADERMAL QUADRIVALENT, AND FLUZONE HIGH-DOSE VACCINES

Fluzone Quadrivalent, Fluzone Intradermal Quadrivalent, and Fluzone High-Dose vaccines are indicated for active immunization for the prevention of influenza disease caused by influenza A subtype viruses and type B virus(es) contained in each vaccine. Fluzone Quadrivalent vaccine is approved for use in persons 6 months of age and older. Fluzone Intradermal Quadrivalent vaccine is approved for use in persons 18 through 64 years of age. Fluzone High-Dose vaccine is approved for use in persons 65 years of age and older.

Before administering Fluzone Quadrivalent, Fluzone Intradermal Quadrivalent, or Fluzone High-Dose vaccine, please see full Prescribing Information.

To order from the Fluzone vaccine portfolio, visit **VaccineShoppe.com** or call **1-800-VACCINE** (1-800-822-2463).

Fluzone Quadrivalent, Fluzone Intradermal Quadrivalent, and Fluzone High-Dose vaccines are manufactured and distributed by Sanofi Pasteur Inc.
