The Honorable David McKinley
U.S. House of Representatives
2239 Rayburn House Office Building
Washington, DC 20515

Dear Representatives Schrier, Joyce, Butterfield, and McKinley,

On behalf of the undersigned organizations, we would like to share our support and thank you for introducing the *Strengthening the Vaccines for Children Program Act of 2021* (H.R. 2347).

Since its inception in 1993, the Vaccines for Children (VFC) program has increased vaccination rates across all races, ethnicities and income groups, and reduced racial and ethnic disparities.^{i,ii} The program provides federally purchased vaccines to approximately 50% of all children in the United States, with more than 80% administered in physicians' offices, allowing the trusted relationships within the medical home to identify vaccine gaps and to bolster vaccine confidence.

While the VFC program has been a tremendous success in providing vaccines at no cost to eligible children, current financial and administrative barriers make it difficult for pediatricians, family physicians and other clinicians to participate. For example, low payment rates that do not account for the time needed to counsel families and burdensome administrative requirements related to vaccine storage, refrigeration, and monitoring can dissuade practices from enrolling as VFC providers.

Unfortunately, the COVID-19 pandemic has only exacerbated these pre-existing barriers. The pediatric vaccine delivery system, including pediatricians, family physicians, health centers, and others have faced serious financial challenges during the pandemic due to drops in utilization and increased costs of personal protective equipment (PPE), technology for telehealth, and overhead required for practice modifications for infection control. The dramatic drop in revenue compounded with higher costs has financially stressed many practices and has forced difficult changes including layoffs, reducing hours or closing clinic sites, cancelling vaccine orders, and other measures. Some are even considering capping or reducing the number of Medicaid patients in their panels or dropping VFC and/or Medicaid participation altogether.

We have also seen a troubling decrease in childhood immunizations over the course of the public health emergency. Data released in November from Blue Cross and Blue Shield showed an estimated 26% decrease of those receiving the Measles, Mumps, Rubella (MMR) and the Diphtheria, Tetanus and Acellular Pertussis (DTaP) vaccines, while the Polio vaccine dropped 16%.ⁱⁱⁱ More recent data from the Centers for Disease Control and Prevention (CDC) mirrors this trend and shows that as of March 21, 2021, overall VFC provider orders (other than flu) are down by more than 11.1 million doses compared to the previous year, with MMR/MMRV down by more than 1.4 million doses.^{iv} Children who cannot access vaccinations are left vulnerable to infectious diseases like measles and whooping cough and could leave their communities, particularly school settings, more vulnerable to outbreaks of other infectious diseases at the same time COVID-19 continues to spread.

Furthermore, children's Medicaid enrollment has increased by more than 10% over the past year as a result of pandemic-related job and income loss, making the demand for VFC providers more acute than ever.^v It is imperative that we bolster the pediatric vaccine delivery system immediately, both to address the gap in routine childhood immunizations as children and adolescents prepare to return to school, and to prepare for widespread administration of a COVID-19 vaccine once it is approved for use in pediatric populations.

As medical, public health, patient and education organizations, we strongly support the goals of the *Strengthening the Vaccines for Children Program Act of 2021*. Building on the successes of the VFC program, the legislation provides surge capacity responding to the pandemic and ensures long-term improvements in children's access to vaccinations. Of particular importance, the bill provides incentive payments for participating providers to stay in the program—and entice new providers to join—which can help cover start-up and operational costs. This bill also addresses providers' financial burden by increasing Medicaid payment for vaccine administration to match Medicare payment rates for two years.

The legislation would also make permanent programmatic changes to help strengthen the VFC program in the long run, including by extending VFC eligibility to children enrolled in Children's Health Insurance Programs (CHIP) and enabling underinsured children to receive VFC vaccines in their medical home. Additionally, the legislation would rectify a technical issue that currently prevents appropriate VFC payment for administration of multiple component vaccines, finally recognizing the additional time needed to counsel and educate families about vaccines.

We appreciate your commitment to ensuring high vaccination rates and to bolster the childhood vaccine delivery system and we are pleased to support the *Strengthening the Vaccines for Children Program Act of 2021*. We urge Congress to swiftly pass this legislation and we look forward to working with you to strengthen the Vaccines for Children program.

Sincerely,
