June 23, 2022

The Honorable Rosa DeLauro  
Chair  
Committee on Appropriations  
U.S. House of Representatives  
2413 Rayburn House Office Building  
Washington, D.C. 20515

The Honorable Kay Granger  
Ranking Member  
Committee on Appropriations  
U.S. House of Representatives  
1026 Longworth House Office Building  
Washington, D.C. 20515

Dear Chair DeLauro and Ranking Member Granger:

On behalf of the American Academy of Family Physicians (AAFP), which represents 127,600 family physicians and medical students across the country, I write to urge support for several primary care priorities in the Fiscal Year (FY) 2023 Labor, Health and Human Services, Education, and Related Agencies (Labor-HHS) appropriations bill as Congress finalizes the federal budget.

The Labor-HHS appropriations bill provides critical funding for agencies and programs that our members and their patients rely on for access to care, research to improve the efficacy and safety of health care and medical treatments, essential primary care workforce programs, and disease prevention and health promotion efforts. Specifically, the AAFP supports robust funding for the following priorities in the final FY 2023 Labor-HHS appropriations bill.

**Primary Care Workforce**
Primary care is the only health care component where an increased supply is associated with better population health and more equitable outcomes. Unfortunately, it is projected that we will face a shortage of up to 48,000 primary care physicians by 2034. Despite being the largest specialty in the U.S. health system, primary care accounts for a mere 5-7 percent of total health care spending. COVID-19 has also highlighted the urgency of building and financing a robust, well-trained, and accessible primary care system in our country. The AAFP urges the Committee to appropriate robust funding for the Health Resources & Services Administration (HRSA) including support for Title VII primary care workforce and training programs, the National Health Service Corps loan repayment and scholarship programs to help address physician shortages, and various HRSA programs that increase access to quality care, better leverage existing investments and improve health outcomes at a lower cost.

We also urge the Committee to appropriate robust funding for the Agency for Healthcare Research and Quality (AHRQ) to ensure it can continue to produce evidence to support clinical decision making, reduce health care costs, advance patient safety, decrease medical errors, and improve health care quality and access.

**Primary Care Investment**
The National Academies of Sciences, Engineering, and Medicine released a report last year advocating for increased investment and implementation of high-quality primary care, classifying primary care as a “common good” and the only health care component where an increased
supply is associated with improved population health and more equitable health outcomes. As such, the AAFP urges the Committee to appropriate adequate funding for the Department of Health & Human Services (HHS) to establish the HHS Secretary’s Council on Primary Care, the Office of Primary Care, and a Primary Care Advisory Committee to ensure primary care is appropriately coordinated and elevated across federal agencies in a sustained manner.

Public Health
The ongoing COVID-19 pandemic has put a significant strain on our chronically underfunded public health infrastructure and has reminded us of the importance of a coordinated public health response and disease prevention efforts. The AAFP has long advocated for better integration of primary care and public health in our health care system. Being on the front lines of health care, family physicians are uniquely positioned to serve as the foundation of a modernized, high-functioning health care system that can improve patient outcomes, address health inequities, and reduce costs. The AAFP urges the Committee to appropriate robust funding for the Centers for Disease Control & Prevention (CDC) including support for increasing routine vaccination rates, data modernization to improve pandemic preparedness and response, tobacco and smoking prevention, gun violence research, mitigating the health impact of climate change, and reducing community violence.

Maternal Health
More women die from pregnancy-related complications in the U.S. than in any other developed country, and the rate of maternal deaths continues to rise. According to the CDC, approximately 700 pregnancy-related deaths occur in the U.S. each year and 60 percent of these deaths are preventable. Major disparities in maternal mortality exist, with Black women three to four times more likely than non-Hispanic white women to die due to pregnancy-related complications and Indigenous women more than twice as likely than non-Hispanic white women to die due to pregnancy-related complications. Sustained federal funding is critical to address the maternal health crisis that has only worsened during the COVID-19 pandemic, and its disproportionate impact on minority women. As such, the AAFP urges the Committee to appropriate robust funding for HRSA, CDC, and NIH programs that seek to prevent maternal deaths, eliminate inequities in maternal health outcomes, and improve maternal health.

Behavioral Health
Family physicians provide comprehensive behavioral health services and are a major source for mental health care in the U.S. Additionally, primary care physicians are often the first point of care for most patients. Nearly 40 percent of all visits for depression, anxiety, or cases defined as “any mental illness” were with primary care physicians, and primary care physicians are more likely to be the source of physical and mental health care for patients with lower socioeconomic status and for those with co-morbidities. This underscores the need to better resource primary care physicians and improve behavioral health integration within the primary care setting, in addition to strengthening the behavioral health workforce and improving coverage for services. The AAFP urges the Committee to appropriate robust funding for mental health and substance use disorder programs, such as HRSA’s Pediatric Mental Health Care Access Program, to ensure all patients, but especially children and adolescents, can access mental health services and support the integration of behavioral and mental health services into primary care settings.
The AAFP also supports robust funding for block grant programs that provide essential community mental health resources, like SAMHSA’s Community Mental Health Services Block Grant and the Substance Use Prevention, Treatment, and Recovery Services Block Grant.

The AAFP applauds the work of the Committee to get this critical legislation advanced before the end of the current fiscal year. For more information, please contact John Aguilar, Manager of Legislative Affairs, at jaguilar@aafp.org.

Sincerely,

Ada D. Stewart, MD, FAAFP
Board Chair, American Academy of Family Physicians
