

Statement of the American Academy of Family Physicians

Statement for the Record to the Senate Committee on Appropriations Concerning the Bill to Fund the Departments of Labor, Health and Human Services, & Education, and Related Agencies Appropriations for FY 2014

May 2, 2013

The American Academy of Family Physicians (AAFP), representing 110,600 family physicians and medical students nationwide, urges the Senate Appropriations Subcommittee on Labor, Health and Human Services, and Education to invest in our nation's primary care physician workforce in the fiscal year 2014 appropriations bill to promote the efficient, effective delivery of health care by providing these appropriations for the Health Resources and Services Administration and the Agency for Healthcare Research and Quality:

- At least \$71 million for Health Professions Primary Care Training and Enhancement authorized under Title VII, Section 747 of the *Public Health Service Act* (PHSA);
- \$10 million for Teaching Health Centers development grants (PHSA Title VII, §749A);
- \$4 million for Rural Physician Training Grants (PHSA Title VII, §749B);
- \$122.2 million for the Office of Rural Health Programs (PHSA §§ 301, 330A, & 338J and §§ 711 and 1820(j), Title XVIII of the *Social Security Act* (SSA));
- At least \$305 million for the National Health Service Corps (PHSA § 338A, B, & I);
- \$120 million for the Primary Care Extension program (PHSA § 399V-1);
- \$3 million for the National Health Care Workforce Commission (ACA § 5101); and
- \$434 million for the Agency for Healthcare Research and Quality (PHSA § 487(d)(3), SSA §1142).

The AAFP is one of the nation's largest medical organizations, representing family physicians, family medicine residents, and medical students nationwide. Founded in 1947, our mission is to preserve and promote the science and art of family medicine and to ensure high-quality, cost-effective health care for patients of all ages.

HEALTH RESOURCES AND SERVICES ADMINISTRATION (HRSA)

Our nation faces a shortage of primary care physicians. The total number of office visits to primary care physicians is projected to increase from 462 million in 2008 to 565 million in 2025 requiring nearly 52,000 additional primary care physicians by 2025.¹ HRSA is the federal agency charged with administering the health professions training programs authorized under Title VII of the *Public Health Services Act* and first enacted in 1963. We urge the Committee to provide at least \$7 billion for HRSA in the FY 2014 appropriations bill.

Title VII Health Professions Training Programs – In the last 50 years, Congress has revised the Title VII authority in order to meet our nation’s changing health care workforce needs. As the only medical specialty society devoted entirely to primary care, the AAFP is gravely concerned that a failure to provide adequate funding for the Title VII, Section 747 Primary Care Training and Enhancement (PCTE) program, will destabilize education and training support for family physicians. Between 1998 and 2008, in spite of persistent primary care physician shortages, family medicine lost 46 training programs and 390 residency positions, and general internal medicine lost nearly 900 positions.² A study published in the *Annals of Family Medicine* on the impact of Title VII training programs found that physicians who work with the underserved in Community Health Centers and National Health Service Corps sites are more likely to have trained in Title VII-funded programs.³ Title VII primary care training grants are vital to departments of family medicine, general internal medicine, and general pediatrics; they strengthen curricula; and they offer incentives for training in underserved areas. In the coming years, medical services utilization is likely to rise given the increasing and aging population as well as the insured status of more people. These demographic trends will worsen family physician shortages. The AAFP urges the Committee to increase the level of federal funding for primary care training to at least \$71 million in FY 2014 to support the continuing work of grantees and allow for a new grant cycle.

Teaching Health Centers – The AAFP has long called for reforms to graduate medical education programs to encourage the training of primary care residents in non-hospital settings where most primary care is delivered. An excellent first step is the innovative Teaching Health Centers program authorized under Title VII, § 749A to increase primary care physician training capacity now administered by HRSA. Federal financing of graduate medical education has led to training mainly in hospital inpatient settings even though most patient care is delivered outside of hospitals in ambulatory settings. The Teaching Health Center program provides resources to any qualified community based ambulatory care setting that operates a

primary care residency. We believe that this program requires an investment of \$10 million in FY 2014 for planning grants.

Rural Health Needs – HRSA’s Office of Rural Health focuses on key rural health policy issues and administers targeted rural grant programs. As the medical specialty most likely to enter rural practice, family physicians recognize the need to dedicate resources to rural health needs. A recent study found that medical school rural programs (RPs) have had a significant impact on rural family physician supply and called for wider adoption of that model to substantially increase access to care in rural areas compared with greater reliance on international medical graduates or unfocused expansion of traditional medical schools.⁴ HRSA’s Rural Physician Training Grant program will help medical schools recruit students most likely to practice medicine in rural communities. This program will help provide rural-focused experience and increase the number of medical school graduates who practice in underserved rural communities. The AAFP recommends that the Committee provide \$4 million for Rural Physician Training Grants in FY 2014.

Primary Care in Underserved Areas – The National Health Service Corps (NHSC) recruits and places medical professionals in Health Professional Shortage Areas to meet the need for health care in rural and medically underserved areas. The NHSC provides scholarships or loan repayment as incentives for physicians to enter primary care and provide health care to Americans in Health Professional Shortage Areas. By addressing medical school debt burdens, the NHSC also helps to ensure wider access to medical education opportunities. The AAFP recommends that the Committee provide at least the mandatory funding of \$305 million for the NHSC in FY 2014.

The AAFP has worked closely with HRSA to promote data-driven community health center expansion. The mapping tool developed and managed by the Robert Graham Center for Policy Studies in Family Practice and Primary Care identifies areas in greatest need for Federally Qualified Health Centers. Since the launch of the tool on July 1, 2010, the UDS Mapper has registered over 4,500 users and can be found at <http://www.udsmapper.org/about.cfm>.

AGENCY FOR HEALTHCARE RESEARCH AND QUALITY (AHRQ)

The mission of the Agency for Healthcare Research and Quality (AHRQ)—to improve the quality, safety, efficiency, and effectiveness of health care for all Americans—closely mirrors AAFP’s own mission. AHRQ provides the critical evidence reviews that the AAFP and other physician specialty societies use to produce clinical practice guidelines. AHRQ promotes evidence-based patient safety practices. In addition, AHRQ takes research results from NIH where they restrict research subjects to limit the variables in clinical research and brings the practical information to the practicing physicians who treat patients without those clinical restrictions. AHRQ provides patient-centered health research which improves

health care quality by providing patients and physicians with state-of-the-science information on which medical treatments work best for a given condition. The AAFP asks that the Committee provide at least \$434 million for AHRQ in FY 2014.

Primary Care Extension Program – The AAFP supports AHRQ’s Primary Care Extension Program to provide assistance to primary care physicians about evidence-based therapies and techniques so that they can incorporate them into their practice. As AHRQ develops more scientific evidence on best practices and effective clinical innovations, the Primary Care Extension Program will disseminate the information learned to primary care practices across the nation in much the same way as the federal Cooperative Extension Service provides small farms with the most current agricultural information and guidance. The AAFP recommends that the Committee provide \$120 million for the AHRQ Primary Care Extension program in FY 2014.

NATIONAL HEALTH CARE WORKFORCE COMMISSION

Appointed on September 30, 2010, the 15-member National Health Care Workforce Commission was intended to serve as a resource with a broad array of expertise. The Commission was directed to analyze current workforce distribution and needs; evaluate health care education and training; identify barriers to improved coordination at the federal, state, and local levels and recommend ways to address them; and encourage innovations. There is broad consensus about the waning availability of primary care physicians in the United States, but estimates of the severity of the regional and local shortages vary. The AAFP supports the work of the Commission to analyze primary care shortages and propose innovations to help produce the physicians that our nation needs and will need in the future. We request that the Committee provide \$3 million in FY 2014 so that this important Commission can begin this important work.
