Performance Measures (Chart Review)

METRIC® – A Performance Improvement Activities Solution

The AAFP is an active participant in the American Medical Association (AMA)-convened Physician Consortium for Performance Improvement® (Consortium). The Consortium has posted over 200 evidence-based clinical performance measures in 42 clinical topics and conditions. The METRIC program utilizes primary care relevant measures from the Consortium in the clinical assessment step of each module.

Learn more about the Physician Consortium for Performance Improvement (PCPI) and review the details of performance measures for specific clinical conditions.

Asthma Module
- Assessment of current control
- Asthma medications prescribed
- Completed asthma assessment tool
- Daytime and nighttime symptom frequency
- Frequency of missed or modified activities
- Long-term control medication use
- Possible triggers and allergens
- Short-acting beta-agonist inhaler use frequency
- Frequency and severity of acute attacks/exacerbations
- Medication adherence
- Smoking/smoking cessation

Hypertension Module
- Blood pressure measurement
- Lipid profile measurement
- Glucose screen for diabetes
- BMI or waist circumference measurement
- Serum creatinine measurement
- Urine protein measurement
- Documentation of appropriate counseling for:
  ◊ The DASH plan
  ◊ Weight reduction
  ◊ Alcohol consumption
  ◊ Physical activity
  ◊ Sodium intake
  ◊ Smoking/smoking cessation
