Annual Wellness Visit: What's in it for Me?

Arnold Cuenca, DO, CAQSM, FAAFP

ACTIVITY DISCLAIMER

The material presented here is being made available by the American Academy of Family Physicians for educational purposes only. Please note that medical information is constantly changing; the information contained in this activity was accurate at the time of publication. This material is not intended to represent the only, nor necessarily best, methods or procedures appropriate for the medical situations discussed. Rather, it is intended to present an approach, view, statement, or opinion of the faculty, which may be helpful to others who face similar situations.

The AAFP disclaims any and all liability for injury or other damages resulting to any individual using this material and for all claims that might arise out of the use of the techniques demonstrated therein by such individuals, whether these claims shall be asserted by a physician or any other person. Physicians may care to check specific details such as drug doses and contraindications, etc., in standard sources prior to clinical application. This material might contain recommendations/guidelines developed by other organizations. Please note that although these guidelines might be included, this does not necessarily imply the endorsement by the AAFP.
DISCLOSURE

It is the policy of the AAFP that all individuals in a position to control content disclose any relationships with commercial interests upon nomination/invitation of participation. Disclosure documents are reviewed for potential conflict of interest (COI), and if identified, conflicts are resolved prior to confirmation of participation. Only those participants who had no conflict of interest or who agreed to an identified resolution process prior to their participation were involved in this CME activity.

All individuals in a position to control content for this session have indicated they have no relevant financial relationships to disclose.

The content of my material/presentation in this CME activity will not include discussion of unapproved or investigational uses of products or devices.

Arnold Cuenca, DO, CAQSM, FAAFP

*Family Physician/Sports Medicine Physician, MemorialCare Medical Group, Mission Viejo, California*

Dr. Cuenca earned his medical degree at Western University of Health Sciences in Pomona, California, and completed his family medicine residency at the Scripps Family Medicine Residency Program, Chula Vista, California. Subsequently, he completed a one-year fellowship in primary care sports medicine at Western University of Health Sciences Osteopathic Postdoctoral Training Institute (OPTI-West)/San Diego Sports Medicine and Family Health Center. Over the years, he has served in multiple clinical faculty appointments and has lectured at both local and national conferences on the topics of family medicine, sports medicine, and practice management. Currently, he enjoys serving as a volunteer assistant clinical professor for the University of California, Irvine medical school and as a preceptor for students in Chapman University's Physician Assistant program. He also serves on the editorial advisory board for *FPM* journal, which has published several articles he has authored over the years. An avid runner and third-degree black belt in Tang Soo Do, a karate-based Korean martial art, Dr. Cuenca endeavors to live a healthy, balanced lifestyle and encourages his patients to do the same.
Learning Objectives

1. Identify techniques to improve specificity and accuracy of coding and billing practices.

2. Determine areas of opportunity for maximizing revenue through appropriate billing and coding.

3. Evaluate current quality improvement initiatives/processes to ensure sustainability.

4. Utilize best practices to optimize clinical, financial, and operational performance.

Audience Engagement System

Step 1

Step 2

Step 3
It all began 9 years ago…

“Please, no Medicare under Social Security!”

“It would make things worse than they are now, not better.”

No Medicare!
Many doctors throughout the country thought that the cost of Federal medical insurance for senior citizens would overwhelm the health care system. Dr. Richard Albert of Alice, Texas, wrote a note opposing Medicare on his prescription pad and sent it to the President.

Personal Photo, taken May 2, 2019. LBJ Library, Austin, TX
The Patient Protection and Affordable Care Act of 2010

- Under the Affordable Care Act, Medicare pays in full, without patient co-pays or deductibles, for the initial “Welcome to Medicare” exam, the Annual Wellness Visit, and many recommended preventive services
- January 1, 2011; this benefit extends to all Medicare beneficiaries (including those with Medicare Advantage insurance)
- January 1, 2012: Centers for Medicare & Medicaid Services (CMS) required that a health risk assessment (HRA) be completed as part of the Annual Wellness Visit

Health Risk Assessment

- Health Risk Assessment: Identifying health behaviors and risk factors that the provider can discuss with the patient in an effort to reduce risk factors and related diseases.
  - Centers for Disease Control and Prevention developed a “framework” for the HRA in a December 2011 report. Major focus areas include physical activity, tobacco/alcohol use, nutrition, depression/anxiety, seat belt use, social/emotional support, pain, ADLs, sleep.

Downloadable HRA Form - FPM Toolbox
Are we doing AWV?

If so, what difference does it make?

• 2011: 7.5% of patients received an AWV
• 2014: 15.6%
• Ganguli, I. et., al. (Feb 2018)
  – Research supported in part by a grant from the NIH’s National Institute on Aging
  – Compared practices of AWV “adopters” to “non-adopters” Medicare claims data up to 2015
    • AWV “non-adopters”: provided no AWV
    • AWV “adopters: provided AWV to at least 25% of their patients
    • visit rates lower among practices caring for underserved populations
      – Such as racial minorities, dually enrolled in Medicaid, living in rural settings
    • Practices that adopted AWV generated greater revenue
      – Higher reimbursement rates for AWV, co-billing with a problem-based visit, and preventive services provided

Are we doing AWV?

If so, what difference does it make?

  – 2015 analysis: Improved immunization rates when AWV utilized
    • PCV13: 33% AWV vs. 14% no AWV
    • Influenza: 64% AWV vs. 44% no AWV
### Challenges of Providing Medicare Wellness Exams

**Time**
- In order to fulfill expectations of Medicare Wellness Visits, there are multiple elements that need to be included
- Physician/Provider and supportive staff challenged to complete all elements in an allotted patient time slot

**Volume**
- The Affordable Care Act expanded coverage to all Medicare beneficiaries, increasing the volume of these types of visits

### Challenges of Providing Medicare Wellness Exams

**Knowledge**
- Multiple types of Wellness exams and different types of Medicare insurance coverage creates confusion of what is expected during these visits by the physician
- The patient is also confused about what the purpose of the wellness visit and what services are covered during their visit based on their insurance

**Missing Elements**
- If any elements are missing from the wellness visit, then billing cannot be submitted correctly

WIFM

• What’s In It For Me?
• What’s In It For My Patients?
• What’s In It For My Practice/Organization?
### Quality Measures

- AWV closes many pay-for-performance quality measure gaps
  - Core Quality Measures Collaborative
    - Created in 2014, includes federal, state, and commercial insurance plan leaders, CMS and National Quality Forum leaders, and national physician organizations
    - Goal: establish broadly agreed upon core quality measures that could be used across payers
    - AAFP has recommended that payers offering alternative payment models for primary care incorporate the core measure set for “Accountable Care Organizations, Patient Centered Medical Homes, and Primary Care”
  - Integrated HealthCare Association’s California-based Value Based P4P (VBP4P) program
  - National Committee for Quality Assurance (NCQA) Healthcare Effectiveness Data and Information Set (HEDIS) measures.
  - Accountable Care Organizations (ACOs) participating in the Medicare Shared Savings Program (MSSP) have specific quality measures for the 2018 and 2019 quality reporting years.

Poll Question 1

Which of the following is true?

A. The “Welcome to Medicare” (aka Initial Preventive Physical Examination) is a detailed exam that includes a thorough history, head to toe physical exam, and discussion of preventive services that includes a written plan.

B. In order to adequately assess hearing, an audiogram is recommended during the IPPE or AWV.

C. A Registered Dietitian may perform the AWV.

D. The IPPE and AWV are a covered benefit under Part A Medicare.
Providers of IPPE/AWV

- **IPPE**
  - Physician
  - Other qualified non-physician practitioner
    - Physician assistant
    - Nurse practitioner
    - Clinical nurse specialist
- **AWV**
  - Same as IPPE
  - Medical professional (including a health educator, a registered dietitian, nutrition professional, or other licensed practitioner) or a team of such medical professionals working under the direct supervision of a physician
    - The physician or non-physician practitioner who is billing Medicare for the service must be present in the office suite (not in the exam room) and immediately available to provide assistance and direction throughout the time the service is being provided

Definitions

- **IPPE:** “Welcome to Medicare” (Initial PREVENTIVE Physical Examination)
- **AWV:** Annual Wellness Visit
- **IPPE vs. AWV:**
  - IPPE is one-time initial preventive physical exam (“WELCOME TO MEDICARE” physical exam) within the first 12 months of patient’s enrollment under Part B Medicare
  - AWV is a preventive physical exam for patients enrolled AFTER the first 12 months of enrollment (2 categories)
    - **AWV, Initial Visit:** covered 12 months after enrollment in Medicare or 12 months after the IPPE
    - **AWV, Subsequent Visit:** performed 12 months after AWV, Initial
- **IPPE/AWV** is a REVIEW of the patient’s health, NOT a comprehensive physical “head to toe” exam
  - satisfactory to perform a **FOCUSED PHYSICAL EXAM** based on history
  - an overview of patient health and focuses on developing a plan to keep the patient healthy
What if the patient brings up other issues?

By the way.....

• If a patient brings up other issues outside of the IPPE/AWV (such as “oh by the way” or “laundry list”), then it is up to the provider to code a -25 modifier and 99213/4/5 as appropriate per clinical judgment.

• Routine Physical Exams ARE NOT an Original/Straight Medicare covered benefit. If a Medicare patient is scheduled for IPPE/AWV and requests a Routine Physical, they must sign an ABN form because they will be responsible for the visit.
  – If you bill a Medicare patient for code 99387 or 99397, document the fact that the service was provided per patient’s request, ABN was obtained, and make sure your progress note supports this service.

• Scripting is important for scheduling AWV

TIPS

The Welcome to Medicare visit and annual wellness visit are to review the patient’s wellness and develop a plan to keep the patient healthy. These include a focused physical exam— not a comprehensive, “head-to-toe” physical exam.

If the patient has one or two additional medical problems, the physician may choose to treat these at the same time as the wellness visit. This additional service will be billed separately and, therefore, is subject to the Medicare deductible/co-insurance.

If the patient has multiple medical conditions that need treatment, we recommend scheduling a regular office visit and explaining that the wellness visit can be scheduled when he or she is feeling better.

If the patient requests a comprehensive physical exam in addition to a wellness visit, two separate appointments may be needed. Schedule the wellness visit and recommend that the patient schedule the comprehensive physical exam (which is not covered by Medicare) after the wellness visit if it still seems necessary.

SAMPLE SCRIPTS

1

Patient: “I’ve heard Medicare is covering physicals.” Or “I want to schedule a complete physical exam.”

Scheduler: “Are you calling to schedule the new annual wellness visit benefit that is covered by Medicare or are you wanting the Welcome to Medicare visit, which is available to anyone in their first year of Medicare coverage?”

Note: If the patient wants the Welcome to Medicare visit, jump to Script 2.

Patient: “I would like to schedule the annual wellness visit.”

Scheduler: “The annual wellness visit is an overview of your health and focuses on developing a plan to keep you healthy. Just so you know, it does not include or replace a complete, ‘head-to-toe’ physical exam.”

Patient: “I understand, I would like to schedule the annual wellness visit. I only have a few minor concerns.”

Scheduler: “I’ll be happy to schedule your annual wellness visit. Please understand if the doctor addresses your additional medical concerns, that service will be subject to your Medicare deductible or coinsurance.”

Note: Schedule the annual wellness visit appointment and recommend the patient read his or her Medicare information about what to expect during the annual wellness visit.

2

Patient: “I want to schedule my Welcome to Medicare visit.”

Scheduler: “When did your Medicare start?”

Note: If patient enrolled in Medicare more than 12 months ago, skip the following question.

Scheduler: “Have you previously had a Welcome to Medicare visit?”

Note: If no, schedule the appointment and recommend the patient read his or her Medicare information about what to expect during the Welcome to Medicare visit.

If yes, or if more than 12 months has passed since the Welcome to Medicare visit, continue. If less than 12 months has passed, instruct the patient to call back to schedule an annual wellness visit when appropriate.

Scheduler: “You are not eligible for the Welcome to Medicare visit (give reason, reference the patient’s answer to above question), however, we can schedule you for an annual wellness visit. The annual wellness visit is an overview of your health and focuses on developing a plan to keep you healthy. Just so you know, it does not include or replace a complete, ‘head-to-toe’ physical exam.”

Patient: “I understand, I would like to schedule the annual wellness visit. I only have a few minor concerns.”

Scheduler: “I’ll be happy to schedule your annual wellness visit. Please understand if the doctor addresses your additional medical concerns, that service will be subject to your Medicare deductible or coinsurance.”

Note: Schedule the annual wellness visit appointment and recommend the patient read his or her Medicare information about what to expect during the annual wellness visit.

Physician/Provider
Expectations for IPPE or AWV

- Perform a focused physical exam.....NOT A COMPREHENSIVE PHYSICAL EXAM) for IPPE and AWV
- Review the completed screening tests for Depression, Functional ability, and cognitive impairment and make the final diagnosis
- End of Life Planning (POLST) if needed/Advanced Directive
- Education, counseling, and referral based on History and Exam
- Complete a brief written plan and give to the beneficiary for obtaining the appropriate screenings and other preventive services that are covered as separate Medicare Part B benefits.
- Report HCC codes for Medicare Advantage patients
- Physicians can bill IPPE/AWV visit codes in addition to any other preventive services provided

Physician/Provider
Expectations for IPPE or AWV

- What is a “focused” physical exam?
  - IPPE
    - Height, Weight, Blood Pressure, BMI, Visual Acuity Screen
    - Any “physical exam” deemed appropriate by medical and social history
  - MWI
    - Height, Weight, Blood Pressure, BMI
    - Any “physical exam” deemed appropriate by medical and social history
  - MWS
    - Weight, Blood Pressure
    - Any “physical exam” deemed appropriate by medical and social history
- Should directly observe for signs of cognitive impairment or decline; provider may elicit feedback and information from family members or caretakers
Cognitive screening

- As many as 81% of patients who meet criteria for dementia have not received a formal diagnosis
- CMS does not require or recommend a specific tool
- Alzheimer’s association expert workgroup recommendation:
  - If “yes” answered for memory loss, confusion, or need for assistance with ADLs, then use structured assessment
    - Mini-Cog
    - General Practitioner Assessment of Cognition
    - Memory Impairment Screen
- Identifying patients with cognitive impairment and dementia provides opportunities to connect them resources, support, and opportunities for Advance Care Planning.
  - 2013 study of hospitalized adults < 6 months life expectancy
    - 48% had documented health care preferences
    - 73% named a health care agent
    - 30% discussed wishes with PCP

Physician/Provider Expectations for IPPE or AWV

- At a minimum, for a very healthy patient with no indication to perform a “focused” hands-on physical exam, you can satisfactorily meet the exam requirements with Vital signs alone

- Personalized Prevention Plan Services (PPPS): A “written plan” such as a checklist for the next 5-10 years provided to the patient
  - Appropriate preventive services Medicare covers
  - United States Preventive Services Task Force (USPSTF) and Advisory Committee on Immunization Practices (ACIP) recommendations
  - Health status and screening history
  - Treatment options of any mental health conditions identified
  - Personalized health advice and/or referrals to health education or preventive counseling services (weight loss, tobacco cessation, nutrition, etc.)
Poll Question 2

When performed as part of the Annual Wellness Visit/IPPE, which of the following preventive services will the patient be responsible for a co-payment

A. Cardiovascular risk reduction counseling
B. Digital rectal exam
C. Alcohol screening
D. Pelvic and breast exam
E. Advance Care Planning

Covered Preventive Services

HCPCS codes with wRVU
(based on national payment amount information)

The following are HCPCS codes and ICD-10 codes for wellness visits that may be provided in an office visit.

RVU and payment information from 2019 Medicare Physician Fee Schedule for exams performed in the office, National data listed

Excluded are other preventive services that do not generated wRVU (such as immunizations, diagnostic imaging, etc.)

# How to Document and Code Medicare Preventive Services

Think of this as your field guide to the rules surrounding Medicare preventive services.

Cindy Hughes, CPC, CFPC

Reproduced with permission from Medicare Wellness Visits: Reassessing Their Value to Your Patients and Your Practice, March/April, 2019, Vol 26, No 2, Issue of Family Practice Management Copyright © 2019 American Academy of Family Physicians. All Rights Reserved.
G0442: Alcohol misuse screening

- The USPSTF considers 3 tools as the instruments of choice
  - Alcohol Use Disorders Identification Test (AUDIT)
    - most widely studied for detecting alcohol misuse
  - The abbreviated AUDIT-Consumption (AUDIT-C)
  - Single-question screening
    - National Institute on Alcohol Abuse and Alcoholism (NIAAA) recommends asking “How many times in the past year have you had 5 [for men] or 4 [for women and all adults older than 65 years] or more drinks in a day?”
G0443: Alcohol misuse counseling

- The 5A's approach adopted by the USPSTF:
  - Assess: Ask about/assess behavioral health risk(s) and factors affecting choice of behavior change goals/methods.
  - Advise: Give clear, specific, and personalized behavior change advice, including information about personal health harms and benefits.
  - Agree: Collaboratively select appropriate treatment goals and methods based on the patient’s interest in and willingness to change the behavior.
  - Assist: Using behavior change techniques (self-help and/or counseling), aid the patient in achieving agreed upon goals by acquiring the skills, confidence, and social/environmental supports for behavior change, supplemented with adjunctive medical treatments when appropriate.
  - Arrange: Schedule follow-up contacts (in person or by telephone) to provide ongoing assistance/support and to adjust the treatment plan as needed, including referral to more intensive or specialized treatment.

https://www.uspreventiveservicestaskforce.org/Page/Name/behavioral-counseling-interventions-an-evidence-based-approach

G0444: Depression screening

- Patient Health Questionnaire (PHQ-2 or PHQ-9)
- Geriatric Depression Scale in older adults
- Edinburgh Postnatal Depression Scale (EPDS) in postpartum and pregnant women
G0446: Face to face intensive behavioral therapy for CVD

- CMS covers intensive behavioral therapy for CVD (aka CVD risk reduction visit), which consists of the following three components:
  - encouraging aspirin use for the primary prevention of CVD when the benefits outweigh the risks for men age 45-79 years and women 55-79 years;
  - screening for high blood pressure in adults age 18 years and older; and
  - intensive behavioral counseling to promote a healthy diet for adults with hyperlipidemia, hypertension, advancing age, and other known risk factors for cardiovascular- and diet-related chronic disease.

G0447: Intensive Behavioral Therapy (IBT) for Obesity

- CMS covers intensive behavioral therapy for obesity, defined as a body mass index (BMI) \( \geq 30 \text{ kg/m}^2 \), for the prevention or early detection of illness or disability.
- Intensive behavioral therapy for obesity consists of the following:
  - Screening for obesity in adults using measurement of BMI calculated by dividing weight in kilograms by the square of height in meters (expressed kg/m\(^2\));
  - Dietary (nutritional) assessment; and
  - Intensive behavioral counseling and behavioral therapy to promote sustained weight loss through high intensity interventions on diet and exercise.

G0296: Lung Cancer Screening Counseling

Must include all of the following elements:

- Determination of beneficiary eligibility including age, absence of signs or symptoms of lung cancer, a specific calculation of cigarette smoking pack-years; and if a former smoker, the number of years since quitting
- Shared decision-making, including the use of one or more decision aids, to include
  - benefits and harms of screening, follow-up diagnostic testing, over-diagnosis, false positive rate, and total radiation exposure;
  - Counseling on the importance of adherence to annual lung cancer LDCT screening, impact of co-morbidities, and ability or willingness to undergo diagnosis and treatment;
  - Counseling on the importance of maintaining cigarette smoking abstinence if former smoker; or the importance of smoking cessation if current smoker and, if appropriate, furnishing of information about tobacco cessation interventions; and,
  - If appropriate, the furnishing of a written order for lung cancer screening with LDCT.

- AHRQ downloadable .pdf (free for patients and clinicians to download)

Case Studies
A 67-year-old male, who is an established patient of your practice, is seeing you for an initial AWV. His chronic problems include hypertension and dyslipidemia.

He is taking hydrochlorothiazide 25 mg per day and atorvastatin 20 mg at bedtime.

His history and the health risk assessment he completed confirm he has smoked one pack of cigarettes per day for 34 years and quit about 10 years ago. He does not have an advance directive. He rarely drinks alcohol, and his PHQ-2 depression screening score is zero.

His vital signs are stable with good blood pressure control. His BMI is 33.7. He requests a digital rectal exam (DRE) because his father had prostate cancer.

You create the patient’s personalized prevention plan and discuss your clinical recommendations with the patient, who agrees to receive several preventive services. You order the labs and imaging, provide counseling focused on several of the patient's health risk behaviors, and recommend a follow-up visit in six months or sooner if needed to address test results.
Poll Question 4

Which of the following preventive care service cannot be separately reported during this visit?

A. Intensive behavioral counseling for cardiovascular disease (CVD)
B. Counseling visit to discuss need for lung cancer screening
C. Advance care planning
D. Alcohol screening
E. Depression screening
F. Counseling for obesity
G. Prostate cancer screening with a DRE

Recommended covered preventive services
• Lipid panel
• Diabetes screening
• Hepatitis C screening
• Lung Cancer screening with Low Dose CT Chest
• Pneumococcal vaccine
• PSA
• AAA screening with abdominal ultrasound

Potential wRVU: 5.7
A 77-year-old female, who is an established patient of your practice, is seeing you for her first AWV. She has a Medicare Advantage insurance plan. Her previous office visit was about nine months ago. She has diabetes, hypertension, peripheral neuropathy, glaucoma, mild major depression, anxiety, and COPD. She is due for her routine lab work and is requesting refills of all her medications. She would like a flu shot, but the rest of her immunizations are current.

Her list of medications includes metformin 500 mg twice a day, sitagliptin 50 mg daily, lisinopril 10 mg daily, gabapentin 300 mg three times per day, albuterol as needed, tiotropium daily, alprazolam 0.25 mg daily as needed, sertraline 50 mg daily, and dorzolamide ophthalmic twice a day.

She has tried in the past to wean herself off the alprazolam but needs it to control her anxiety; she fills her prescription for 30 pills every three or four months, which you confirm via a controlled substance prescription database. Her history, along with her health risk assessment, shows she drinks up to three to four glasses of wine per day. She does not have an advance directive. Her vital signs are stable with good blood pressure control, and her BMI is 22.4.

You address her concerns and order labs appropriate to her chronic medical conditions, refill her medications, order a flu shot, provide counseling related to her health risk behaviors, and discuss your preventive service recommendations as part of her personalized prevention plan.

Given the complexity of her health status, you ask her to schedule a follow-up appointment in one week to go over her lab results. Also, because the patient is a Medicare Advantage beneficiary, you remember to assess and report risk-adjusted diagnoses and HCC codes.
A 57-year-old female, who is an established patient of your practice, recently became disabled. She now has dual insurance coverage with Medicare and Medicaid. She is scheduled for her “Welcome to Medicare” visit. She was seeing a partner of yours who recently retired, and she has transferred to you for care.

Her last visit was four weeks ago, and her diabetes lab work at that time showed that her A1C was 6.7 and her LDL was 94. She had her annual eye exam two months ago. She has diabetes, hypertension, and end-stage renal disease (ESRD).

Her list of medications includes insulin glargine 10 units at bedtime, insulin aspart on a sliding scale, amlodipine 5 mg daily, and pravastatin 10 mg at bedtime.

Her history, along with her health risk assessment, shows that she has multiple sex partners. She does not drink alcohol and does not smoke. Her PHQ-2 depression screening is 0. Her last mammogram was three years ago, and her last Pap smear was six years ago. She has not received her pneumococcal vaccine. She has never had a colonoscopy or fecal occult blood testing. Her vital signs are stable with good blood pressure control and a BMI of 27.1.

She has been feeling sick for the last two weeks with sinus infection symptoms. You treat her for a sinus infection, perform a gynecologic exam and Pap smear, and update her pneumococcal vaccination.

You discuss and then order screens for hepatitis B, hepatitis C, HIV, and sexually transmitted infections (STIs), in addition to a mammogram. You also agree to make referrals for a colonoscopy and medical nutrition therapy for ESRD. Finally, you ask her to follow up in four to six months or as needed.
A 57-year-old female

She is scheduled for her “Welcome to Medicare” visit.

She has diabetes, hypertension, and end-stage renal disease (ESRD).

She has multiple sex partners

She does not drink alcohol

Her PHQ-2 depression screening is 0

You treat her for a sinus infection, perform a gynecologic exam and Pap smear,

Poll Question 5

Which of the following preventive care service cannot be separately reported during this visit?

A. STI prevention counseling
B. Alcohol screening
C. Pelvic and breast exam
D. Pap smear
<table>

Effective January 1, 2016, the Centers for Medicare & Medicaid Services (CMS) pays for Advance Care Planning (ACP)

There are **no limits** on the number of times you can report ACP for a given patient in a given time period. When billing the service multiple times for a given patient, **document the change in the patient's health status and/or wishes regarding their end-of-life care.**

Some people may need ACP multiple times in a year if they are quite ill and/or their circumstances change. Others may not need the service at all in a year.

### Practice Recommendations

- Recognize that the AWV is an opportunity to perform a preventive evaluation for our senior population and to serve as a revenue stream

- Performing AWVs assists in achieving quality metrics and meeting measures

- Use the free, downloadable Preventive Services Checklist and the Lung Cancer Screening Decision-Making Tool

- Don’t forget to capture risk adjustment factor scores for patients with Medicare Advantage plans during the AWV
Arnold E. Cuenca, DO, CAQSM, FAAFP
