Collaborative Care: Integrating Behavioral Health into Primary Care

Jennifer Funderburk, PhD
Andrew S. Valeras, DO, MPH

ACTIVITY DISCLAIMER

The material presented here is being made available by the American Academy of Family Physicians for educational purposes only. Please note that medical information is constantly changing; the information contained in this activity was accurate at the time of publication. This material is not intended to represent the only, nor necessarily best, methods or procedures appropriate for the medical situations discussed. Rather, it is intended to present an approach, view, statement, or opinion of the faculty, which may be helpful to others who face similar situations.

The AAFP disclaims any and all liability for injury or other damages resulting to any individual using this material and for all claims that might arise out of the use of the techniques demonstrated therein by such individuals, whether these claims shall be asserted by a physician or any other person. Physicians may care to check specific details such as drug doses and contraindications, etc., in standard sources prior to clinical application. This material might contain recommendations/guidelines developed by other organizations. Please note that although these guidelines might be included, this does not necessarily imply the endorsement by the AAFP.
DISCLOSURE

It is the policy of the AAFP that all individuals in a position to control content disclose any relationships with commercial interests upon nomination/invitation of participation. Disclosure documents are reviewed for potential conflict of interest (COI), and if identified, conflicts are resolved prior to confirmation of participation. Only those participants who had no conflict of interest or who agreed to an identified resolution process prior to their participation were involved in this CME activity.

All individuals in a position to control content for this session have indicated they have no relevant financial relationships to disclose.

The content of my material/presentation in this CME activity will not include discussion of unapproved or investigational uses of products or devices.

The views expressed are those of the authors and do not reflect the position or policy of the Department of Veterans Affairs or other government agency.

Jennifer Funderburk, PhD

Clinical Research Psychologist, VA Center for Integrated Healthcare, Syracuse VA Medical Center, New York; Adjunct Associate Professor, Department of Psychology, Syracuse University, New York; Adjunct Associate Professor, Department of Psychiatry, University of Rochester, New York

Funderburk earned a doctorate in clinical psychology from Syracuse University. For the last 15 years, she has been working clinically and conducting research on the integration of behavioral health in primary care. Her specific areas of interest are the development and implementation of brief interventions designed to address depression, alcohol use, insomnia, or multiple risk factors in primary care. She is an elected member of the board of directors for the Collaborative Family Healthcare Association (CFHA) and one of the current co-chairs for the Integrated Primary Care Special Interest Group within the Society of Behavioral Medicine (SBM).
Andrew S. Valeras, DO, MPH

Associate Program Director, Dartmouth-Hitchcock Leadership Preventive Medicine Residency, Lebanon, New Hampshire; Core Faculty Physician, NH Dartmouth Family Medicine Residency, Concord, New Hampshire

Dr. Valeras received his undergraduate degrees in biology and philosophy from Boston College in Massachusetts. He earned his medical degree from the Arizona College of Osteopathic Medicine at Midwestern University, Glendale, and his Master of Public Health (MPH) degree from The Dartmouth Institute, Lebanon, New Hampshire. He completed residency at the NH Dartmouth Family Medicine Residency and the Dartmouth-Hitchcock Leadership Preventive Medicine Residency. Currently, he seeks to integrate quality improvement and systems-based thinking with the clinical practice and education of family medicine providers in integrated teams. He does this through the [Systems] course, which is taught to primary care teams via 320 hours of longitudinal experiential learning over three years. Dr. Valeras currently serves as president of the Collaborative Family Healthcare Association.

Learning Objectives

1. Identify team-based care models that integrate behavioral health and primary care services.

2. Describe the difference between coordination, co-location and integration of services.

3. Give examples of the types of conditions behavioral health specialists (LCSW, psychologist, etc) can counsel on that are commonly seen in primary care settings.

Poll Question 1

What is your primary role in your clinic?

A. Clinician  
B. Administrator  
C. Faculty

Context
You have no idea what you just did. I really tried to believe everyone told me its your parents. I can't believe you anymore. Is the Easter bunny real. How about the tooth fairy huh? You just broke my heart.

Nothing will make me feel better you lied to me about something I loved. That broke my heart.

#middle finger emoji
Poll Question 2

Where would you consider your clinic falling on the spectrum?

A. Traditional Care
B. Co-located
C. Integrated
Why Primary Care Integration

- 84% of the time, the 14 most common physical complaints have no identifiable organic etiology
- 80% with a behavioral health disorder will visit primary care at least one time in a calendar year
- 50% of all behavioral health disorders are treated in primary care
- 67% with a behavioral health disorder do not get behavioral health treatment

Why does it matter?

- BH disorders account for half as many disability days as “all” physical conditions.
- Annual medical expenses—chronic medical & behavioral health conditions combined cost 46% more than those with only a chronic medical condition.
- Top five conditions driving overall health cost (work related productivity + medical + pharmacy cost).
- Healthcare use/costs are twice as high in diabetes and heart disease patients with depression.

Top 5 Conditions

1. Merikangas et al., Arch Gen Psychiatry. 2007;64:1180-1188.
2. Original source data is the U.S. Dept of HHS the 2002 and 2003 MEPS. AHRQ as cited in Petterson et al. Why there must be room for mental health in the medical home (Graham Center One-Pager).
4. Original source data is the U.S. Dept of HHS the 2002 and 2003 MEPS. AHRQ as cited in Petterson et al. *Why there must be room for mental health in the medical home (Graham Center One-Pager).*

How Can Integration Help Patients?

Two Components Can Impact Outcomes

Model of IBH=Syringe

Interventions Being Delivered=Medicine
**Model of IBH**

- **Primary Care Behavioral Health Model**
  Healthcare Utilization Outcomes
  Patients & Providers report high levels of satisfaction
  Report high levels of rapport with IBH providers

- **Collaborative Care Model**
  Increased Access to Mental Health Services
  Depression Outcomes improved at 6 months
  Evidence of a longer-term benefit up to 5 years

---

**Interventions Being Delivered**

- **Existing Brief Evidence-Based Behavioral Interventions**
  that can be delivered as part of an IBH service targeted
  - Alcohol
  - Tobacco
  - Insomnia
  - Physical Activity
  - Anxiety (CC only)
  - Depression

- **Continued Research is Necessary for anxiety,**
  medication compliance, sexual health, etc.

---

---

1. Funderburk, Shepardson Wray et al. (2018) Brief behavioral interventions targeting behavioral medicine concerns Families, Systems and Health
Integrated Behavioral Health Clinicians (IBHC)

- Patient care
- Community liaison
- Team leader
- Behavioral health education

Buckets of IBH

- Mental Health
- Substance Use
- Chronic Disease
- Behavioral
- Functional
- Family
- Contextual
Poll Question 3

Where do you see the greatest benefit of IBH?

A. Mental Health/Substance Use
B. Chronic Disease/Behavioral Modification
C. Functional
D. Family/Contextual

- Depression, Anxiety
- Drug/Alcohol problems
- PTSD
- Somatization Disorder
- Eating Disorders
- ADD
- Personality Disorders
- Pediatric Behavior Issues
- Psychosis
Chronic Disease + Behavioral

- Obesity
- Diabetes
- CHF
- COPD
- Low Back Pain
- Sleep
- Exercise

Functional

- Fibromyalgia
- Irritable Bowel Syndrome
- Refractory Headache
- Sleep Issues not due to medical pathology
Who Should You Consider Involving IBH?
Let’s see what IBHC looks like in action…

https://youtu.be/Z1ae2nd1XS8

**IBHC Toolbox**

- Warm hand-offs
- Motivational interviewing
- Trauma-informed approach
- Collaboration and continuity
- Solution-focused brief interventions
- Communication
Warm hand-off

• Provider introduces clinician to patient, transferring trust and rapport
• Communicating in front of the patient increases transparency and safety
• Warm hand-offs increase follow-through

Motivational interviewing

• Understand patient’s stage of change
• Roll with resistance
• Explore patient’s ambivalence
Trauma-informed approach

- Recognize signs and symptoms of trauma
- Actively attempt to reduce retraumatization
- Trust is central

Collaboration and Continuity

- “Check-ins” with IBHC when patient is seeing PCP or by phone
- Informal interdisciplinary team meetings
- Weekly team based meetings ("Pod Meetings")
Brief Interventions

• Resource list
• Health behavior change
• Substance use
• Mental health

Teamness

A small number of people with complementary skills who are committed to a common purpose, performance goals, and approach for which they hold themselves accountable.

The Wisdom of Teams (Katzenback and Douglas)
Factors Involved In Teamness

- Communication
- Trust & Respect
- Collaboration
- Coordination
Payment

- Billing Codes Differ based on State, Context, Criteria for definition
- Rapidly Changing
- Be Creative
  - Talk To Finance Person
  - Team based billing (Shared Medical Appt)
  - Coordination of Care

SHOW ME THE MONEY!

Value Based System

- Recognize that You May Save Money Other Ways
- Resource Utilization
  - ED Utilization
  - Hospitalization
  - Decreased time spent per patient, increasing availability for more patients
### Challenges

- Cultural shift to team approach
- Time limitations
- Lack of predictability in daily schedule
- Lack of role clarity
- Allowing roles to remain silo-ed and stay in comfort zone
- Responsibility for patient complexity
- Reimbursement

---

What are potential implications of integrated behavioral health in primary care for your work?
Practice Recommendations

- Consider adding IBH to your clinic due to its ability to help your patients and improve your service delivery
- Recognize adding a new member to the team requires effort within the team to learn new roles, how to communicate, etc.
- Don’t ignore the vast array of presenting issues the IBH program can assist primary care with.
