Winter	Attention parents of teens! Did you know that millions of teens are undervaccinated against serious infectious diseases like human papillomavirus (HPV) and meningococcal meningitis (MenACWY)? Now that the holiday hustle and bustle is over, please call us to see that your teen is up to date on his or her vaccinations, or visit our website to learn more. #VaccinesWork	Schedules are slowing down after the holidays. Call us to see if your teen is up to date on at least four CDC-recommended vaccines. #VaccinesWork
Summer (Back to school theme)	You want only the best for your teen, especially when it comes to his or her health. Before school starts, give us a call to see that they are up to date on their vaccinations. The Centers for Disease Control and Prevention (CDC) recommends at least four vaccines to help protect against serious infectious diseases. You can also learn more at www.cdc.gov/vaccines/who/teens . #VaccinesWork	Teens are at higher risk of certain infectious diseases? Call to see that you're up to date on vaccines before school. #VaccinesWork 
Fall (Flu season theme)	The Centers for Disease Control and Prevention (CDC) says that fewer than 50% of teenagers received the flu vaccine during the 2017-18 flu season. Even fewer receive the second dose of the meningitis (MenACWY) vaccine recommended at age 16. Millions of teens remain undervaccinated, so we're encouraging parents/guardians of teens to call or email us to see that your child is up to date. You can also learn more about vaccinations at www.cdc.gov/vaccines/who/teens . #VaccinesWork	 Teens, help protect yourself and call your physician about a flu shot today. #VaccinesWork
General (Any time theme)	Meningitis is a rare, but potentially deadly disease and teens are at increased risk due to things they often do, such as sharing water bottles, living in dorms, or kissing. Our office is committed to seeing that outbreaks of vaccine-preventable	Outbreaks of vaccine-preventable diseases may still occur? Call your physician to see if your teen is up to date on vaccines. #VaccinesWork

	<p>diseases don't happen in our town. Please call us to make sure your teen is up to date on his or her immunizations. You can also learn more about vaccinations at www.cdc.gov/vaccines/who/teens. #VaccinesWork</p>	
<p>General (Any time theme)</p>	<p>Parents, we know how busy you and your teens are. Since teens are so active, it's important to check on their health. This includes being up to date on their vaccinations. Please call us to check on your teen's vaccination record and see if you need to make an appointment. You can also learn more about vaccinations at www.cdc.gov/vaccines/who/teens. #VaccinesWork</p>	<p>Are you up to date on vaccinations recommended for teens? Not sure? Call your physician to see that you're on track today. #VaccinesWork</p> 
<p>General (Any time theme)</p>	<p>As your teens prepare for their next adventure, we want to help them stay healthy. Did you know that the CDC recommends a second dose of the meningitis (MenACWY) vaccine at age 16 to help protect them during the years they are at increased risk? The Childhood and Adolescent Immunization Schedule now features a specific 16-year-old immunization visit. This modification, as recommended by the CDC and the Advisory Committee on Immunization Practices (ACIP), highlights the importance of scheduling 16-year-olds for necessary vaccinations to help protect them against serious infectious diseases. Give us a call today to see if you should schedule a checkup for your son or daughter. You can also learn more about vaccinations at www.cdc.gov/vaccines/who/teens. #VaccinesWork</p>	<p>The CDC recommends a second dose of the meningitis (MenACWY) vaccine at age 16? Call your physician to learn more. #VaccinesWork</p>
<p>General (Any time theme)</p>	<p>Human papillomavirus (HPV) can cause various cancers in both boys and girls. In 2015 alone, more than 43,000 women and men developed an HPV-associated cancer. The HPV vaccine is recommended for boys and girls at age 11 or 12. The vaccine is given as a multi-</p>	<p>Only two HPV vaccinations are recommended if received at ages 11-14? Call us to learn more. #VaccinesWork</p>

dose series. Teens need two doses if they received the first before age 15. Teens need three doses if they start the series at age 15 or later. Call us today to learn more about the HPV vaccine and other vaccinations that may help protect your teen. You can also learn more about vaccinations at www.cdc.gov/vaccines/who/teens. #VaccinesWork
