

## Study Investigators

### **Jodi Summers Holtrop, PhD**

#### ***Principal Investigator***

Associate Professor and  
Associate Vice Chair for  
Research, Department of Family  
Medicine  
Senior Implementation Scientist,  
ACCORDS and Center on Aging  
University of Colorado School of  
Medicine

### **R. Mark Gritz, PhD**

Associate Professor, Division of  
Health Care Policy and Research  
Associate Director of Business  
Development, ACCORDS  
University of Colorado School of  
Medicine

### **Rowena J. Dolor, MD, MHS**

Director, Duke Primary Care  
Research Consortium  
Associate Professor, Division of  
General Internal Medicine  
Duke University School of  
Medicine

### **Zhehui Luo, MS, PhD**

Associate Professor  
Department of Epidemiology and  
Biostatistics  
Michigan State University College  
of Human Medicine

## Making Obesity Services and Treatment Work (MOST Study)

What works for your patients?  
What are the challenges?  
We want to learn from you!

## Background

- Obese patients incur 46% increased patient costs and 27% more physician visits and outpatient costs.
- Most patients say they would like more help from physicians to manage their weight.
- The delivery of obesity treatment in primary care has the potential to *reverse* the increasing incidence of obesity.
- In 2012 & 2015, the Centers for Medicare and Medicaid Services approved the use of new HCPCS codes for providing Intensive Behavioral Therapy (IBT) treatment for obese patients via individual counseling or in a group setting.
- Despite the opportunity for reimbursement, very few primary care practices have requested reimbursement under these new codes.

## What is the purpose of the study?

The purpose of this study is to learn from practices that are utilizing the IBT for obesity benefit. Your practice has been identified as one that participates in obesity treatment and we want to learn from you.

This study is funded by the Agency for Healthcare Research and Quality (AHRQ).

## What do we need from you if your practice participates?

- One hour total time to complete a written practice survey and a small group telephone interview with 1-3 practice members.
- The time frame is to complete these activities sometime in the next several months (Spring-Summer 2017).

## What are the benefits of participating in this study?

- ✓ A \$50.00 gift card for each person participating (completing survey and/or interview)
- ✓ An opportunity to drive policy and implementation guidelines regarding obesity treatment for patients in primary care
- ✓ De-identified study results
- ✓ An opportunity to participate in a national study!
