Five Mobile Apps to Help You Organize Your Work and Your Life

As patient panels, visit requirements, and documentation burdens grow, it gets harder to ensure that nothing slips through the cracks. You probably already rely on your mobile device to access your email and calendars. This article describes five mobile applications to further boost your productivity at work and home that earned high ratings when reviewed using FPM’s SPPACES criteria.

**WUNDERLIST**

Wunderlist helps users keep track of various to-do lists and obligations.

**Source:** 6 Wunderkinder GmbH.

**Platforms available:** Android 4.1 or later (http://bit.ly/2DP80kH); iOS 8.0 or later for iPhone, iPad, and iPod touch (https://apple.co/2OvmkD3).

**Pertinence to primary care practice:** Physicians are pulled in multiple directions with numerous administrative, family, and patient care responsibilities, each with its own lists of deadlines, meetings, and tasks. Wunderlist is a great method to keep these lists organized.

**Authoritativeness/accuracy/currency of information:** Users can share lists with other individuals and sync them across tablets, phones, and computers. If someone makes changes to a list, those changes are visible to everyone, which is ideal for such things as grocery shopping or event planning. Users can also attach photos, PDFs, presentations, or websites to view later or send to colleagues. If the user forwards an email to me@wunderlist.com, it will appear as a task in the Wunderlist app’s inbox with the body of the email attached as a note and the task already named after the subject of the email.

Users can further organize tasks with separate folders or hashtags, print lists, and set reminders for key dates or deadlines. The app was...
Managing your email can be frustrating and time consuming, especially if you have multiple accounts.

Wunderlist is available in a large number of languages, including English.

Sponsor: 6 Wunderkinder GmbH.
Rating: ★★★★★
This is a great app for physicians who want to be able to track their various activities in one place.

UNROLL.ME
Unroll.Me helps users declutter their email inboxes.
Source: Unroll.Me Inc.
Platforms available: Android 5.0 or later (http://bit.ly/2DSirDV); iOS 9.0 or later for iPhone, iPad, and iPod touch (https://apple.co/2E1U2w3).

Pertinence to primary care practice: Managing your email can be frustrating and time consuming, especially if you have multiple accounts. Unroll.Me offers a quick way of unsubscribing from unwanted emails and consolidating others into one daily review called the Rollup.

CERTALERT+ LICENSE MANAGER
CertAlert+ helps users track current and expiring medical licenses, certifications, and continuing medical education (CME).
Source: National Health Care Provider Solutions LLC.
Platforms available: Android 4.1 or later (http://bit.ly/2xYYohU); iOS 8.0 or later for iPhone, iPad, and iPod touch (https://apple.co/2NfKJYB).

Pertinence to primary care practice: CertAlert+ helps primary care providers to track the many certifications, licenses, and CME credits they obtain throughout their careers, from board certification and state medical and DEA licenses to training and certification programs such as Basic Life Support (BLS), Advanced Cardiovascular Life Support (ACLS), Advanced Trauma Life

KEY POINTS
• Mobile apps can help physicians more efficiently manage many administrative, clinical, and personal demands.
• Productivity apps can combine to-do lists, manage multiple email accounts and schedules, track important licenses and certifications, or compile travel documents.
• Other apps can handle patient phone calls, reduce mail clutter, or allow physicians to electronically sign documents.
Support (ATLS), Advanced Life Support in Obstetrics (ALSO), Pediatric Advanced Life Support (PALS), and Neonatal Resuscitation Program (NRP). CertAlert+ compiles this information and can send programmed reminders when it’s time to recertify or relicense.

**Authoritativeness/accuracy/currency of information:** For each medical license, the user can enter his or her name, two photos of the license, the license’s expiration date, and what state issued the license, as well as program the app to send an email reminder up to two months before its expiration. Users can also record the CME they obtain by title, subject, date, credits, instructor, and location. There is no limit on the number of licenses, certifications, or CME credits the user can track with the app, and all data is retained on the user’s mobile device only, not on any external devices or in cloud storage. The app links to the National Health Care Provider Solutions website (https://nhcps.com/) where users can sign up for a variety of training programs, including BLS, ACLS, PALS, cardiopulmonary resuscitation, automated external defibrillator use, first-aid, and bloodborne pathogens. The app was last updated in February 2018 (iOS) and August 2018 (Android).

**Cost:** Free.

### TriPit: Travel Planner

TriPit helps users keep track of all of their travel needs.

**Source:** TripIt Inc.

**Platforms available:** Android 5.0 or later (http://bit.ly/2ybCNly); iOS 10.0 or later for iPhone, iPad, iPod touch, and Apple Watch (https://apple.co/2OEgrne).

**Pertinence to primary care practice:** Whether attending medical conferences or taking a family vacation, it can be time-consuming to keep track of travel details, including flight itineraries, boarding passes, confirmation numbers, hotel or rental vehicle reservations, shuttles, restaurant reservations, passports, IDs, and driver’s license numbers. TriPit organizes all of this information into an itinerary that users can access both online and off and share with fellow travelers or friends and family back home.

**Authoritativeness/accuracy/currency of information:** The app allows users to sync their travel plans with their calendar, add or edit plans manually, and organize all of their travel plans on the app. To create an itinerary, users can forward confirmation emails from flights, car rental companies, restaurants, etc., to plans@tripit.com; users with linked Gmail, Yahoo, or Outlook email accounts can have TripIt forward these messages automatically. The app then uses this information to create a master itinerary that includes hotel names, addresses, phone numbers, check-in/check-out times, and confirmation numbers.
as well as flight departures and arrivals, terminal, gate, and seat numbers, and duration of flights. Users can also find nearby restaurants, parking, ATMs, and transportation options. The app can also provide past trip itineraries. A premium version, called TripIt Pro, allows users to see alternative flights or open seats for rebooking flights, track travel points, get fare refunds, find better seats, navigate the airport, and determine when to leave for the airport, and it provides real-time alerts for flight delays, cancellations, and gate changes. TripIt transfers all data using encryption protocols, never stores the user’s password on the device, and protects the user’s data with a four-digit Personal Identification Number. The app was last updated in September 2018.

Cost: The basic version is free. The premium version costs $49 per year.

Ease of use: The app is beautifully laid out without extraneous information on the main pages. Users can find more detailed information by tapping on the flight, hotel, or restaurant entry. The app is available in English only.

Rating: ★★★★★
This is a great app for decreasing the amount of time needed to prepare for traveling and removing much of the worry once on the road.

Simpliday combines to-do lists, emails, and meeting schedules into one calendar.

Source: Simpliday AB.
Platform available: iOS 10.0 or later for iPhone, iPad, and iPod touch (https://apple.co/2RxsAsG).

Pertinence to primary care practice: Many physicians use multiple email accounts and calendars. Simpliday combines these into one calendar and one email file and provides a supplemental task manager.

Authoritativeness/accuracy/currency of information: The app can convert emails into tasks and meeting reminders that users can then delegate to others, attaching files and descriptions to help complete those tasks. Simpliday works with Gmail, Outlook, Hotmail, Yahoo, iCloud, Exchange, or any IMAP email account. The app can also use contacts in your phone to easily schedule meetings and assign reminders. A premium account allows users to manage multiple email accounts and send personalized invitations through short message service (SMS), Facebook, or email. Additionally, users can categorize reminders using various colors, set a custom background, and attach any document from Dropbox, Google Drive, iCloud, or OneDrive to meeting notices and reminders. The app was last updated in September 2018.

Cost: The basic version is free. The premium version costs $7.99 a month, $19.49 for three months, or $47.99 for a year.

Ease of use: It is simple to navigate the app’s email, calendar, and task manager functions as well as create new events, tasks, and emails. Unfortunately, the app lacks a search feature for the calendar app and opening it can take about six seconds. It can occasionally have trouble connecting with the server, leaving the user unable to retrieve calendar or email information. The app is available in English, Danish, Norwegian Bokmål, Spanish, and Swedish.
