HIV RISK FACTORS

IV drug use Men who have sex with men

Other STI

Requesting STI testing

Sex with individuals who are IV drug users, bisexual, or HIV positive

Unprotected sex, including anal intercourse

Sex exchanged for drugs or money

Patients in whom to consider PrEP:

Sexually active men who have sex with men who have any of the following:

Sexual relationship with serodiscordant partner

Inconsistent use of condoms during anal sex

Syphilis, gonorrhea, or chlamydia infection in past six months

Sexually active heterosexual patients with any of the following:

Sexual relationship with serodiscordant partner

Inconsistent use of condoms with high-risk partner

Syphilis or gonorrhea infection in past six months

Injection drug users with any of the following:

Shared drug-injection equipment

Risks of infection through sex (see above)

IV = intravenous; PrEP = preexposure prophylaxis; STI = sexually transmitted infection.

HEPATITIS B INFECTION RISK FACTORS

HIV infection Infected sex partner Intravenous drug use Living with an infected individual Men who have sex with men Origin from regions* with prevalence $\geq 2\%$ U.S.-born children of immigrants from regions* with prevalence $\geq 8\%$, if unvaccinated

*—Risk of regions can be found at http://www.cdc.gov/mmwr/preview/mmwrhtml/rr5708a1.htm.

SYPHILIS RISK FACTORS

High-risk sexual behaviors Incarceration Men who have sex with men
Sex exchanged for drugs or money

Local prevalence

TUBERCULOSIS RISK FACTORS

Health professionals*
Homelessness, including former
Immunosuppression*

Prisoners, including former Residents of high-risk regions, including former

*—Evidence for screening not reviewed by the USPSTF because this is standard practice in public health and standard of care for patients with immunosuppression, respectively.

CHLAMYDIA AND GONORRHEA RISK FACTORS

New or multiple sex partners Other STI, including history of STI Partner with STI

Partners who have multiple sex partners

STI = sexually transmitted infection.

Sex exchanged for drugs or

Unprotected sex or inconsistent condom use

CARDIOVASCULAR DISEASE RISK FACTORS

Atherosclerotic cardiovascular disease risk ≥ 7.5% Dyslipidemia Hypertension or elevated blood pressure
Metabolic syndrome

BREAST CANCER RISK FACTORS

Consider use of a risk-assessment model for patients with a history of biopsy or positive family history

SEXUALLY TRANSMITTED INFECTION RISK FACTORS

Similar to those risk factors listed previously for sexually transmitted infections; consider local and population-based prevalence in individual risk assessment

Adult Preventive Health Care Schedule: Recommendations from the USPSTF

Grade A/B Recommendations (with Associated Grade C/D/I Recommendations):

Alcohol misuse screening¹

(B) Screen adults and provide brief behavioral interventions for risky alcohol use

Unhealthy Drug Use Screening²

(B) Screen all adults older than 18 years for unhealthy drug use (by asking questions, not biological specimens)

Depression screening³

(B) Screen adults with systems for evaluation and management

Hypertension screening4

(A) Screen adults; exclude white coat hypertension before starting therapy

Obesity/weight loss screening5

(B) Refer adults with obesity to intensive behavioral interventions for weight loss

Tobacco use and cessation screening⁶

- (A) Screen all nonpregnant adults and provide behavior therapy and U.S. Food and Drug Administration—approved intervention therapy for cessation
- (A) Screen all pregnant women and provide behavior therapy.
- (I) IETRFOA electronic nicotine delivery systems for tobacco cessation
- (I) Pharmacotherapy for tobacco cesation in pregnant persons

Hepatitis C virus infection screening7

(B) Screen adults 18 to 79 years of age

HIV infection screening8

- (A) Screen individuals 15 to 65 years of age
- (A) Screen older and younger persons who are at increased risk

Hepatitis B virus infection screening9

(B) Screen adolescents and adults at high risk

Syphilis screening¹⁰

(A) Screen individuals at increased risk

Tuberculosis screening¹¹

(B) Screen individuals at increased risk

BRCA-related cancer risk assessment/screening12

- (B) Use a familial risk assessment tool (evaluated assessment tools listed in full text) in women with either:
 - Personal or family history of breast, ovarian, tubal, or peritoneal cancers
 - Ashkenazi Jewish ancestry (i.e., ancestry with increased risk of BRCA mutation)

For positive risk tools, offer genetic counseling and genetic testing, if indicated.

(D) Recommend against screening for patients without appropriate family history, personal history, or ancestry

Chlamydia and gonorrhea screening¹³

- (B) Screen sexually active women 24 years and younger, and women at increased risk who are 25 years and older
- (I) IETRFOA screening sexually active men

Intimate partner violence screening14

- (B) Screen women of childbearing age and refer to appropriate services
- (I) IETRFOA screening all vulnerable and older adults for abuse or neglect

Cervical cancer screening¹⁵

(A) Screen women

- 21 to 29 years of age every three years with cytology alone
- Frequency of screening may increase to every five years for women 30 to 65 years of age with cytology and high-risk human papillomavirus cotesting or high-risk human papillomavirus testing alone
- (D) Recommend against screening in women
 - 20 years and younger
 - Older than 65 years if adequately screened previously and no increased risk of cervical cancer
 - With hysterectomy (including cervix) without history of cervical intraepithelial neoplasia grade 2 or 3 or cervical cancer
 - Younger than 30 years with human papillomavirus testing alone or in combination with cytology

Prediabetes and type 2 diabetes screening¹⁶

(B) Screen adults 35 to 70 years of age who are overweight or obese and refer patients with abnormal glucose levels for intensive counseling for healthy diet and exercise

Colorectal cancer screening¹⁷

- (A) Screen patients 50 to 75 years of age with fecal occult blood (or immunochemical) test, sigmoidoscopy, colonoscopy, computed tomography colonography, or multitargeted stool DNA test
- (B) Screen patients 45 to 49 years of age with fecal occult blood (or immunochemical) test, sigmoidoscopy, colonoscopy, computed tomography colongraphy, or multitargeted stool DNA test
- (C) Selectively offer screening to patients 76 to 85 years of age

Breast cancer screening18

- (B) Biennial screening mammography in women 50 to 74 years of age
- (C) Screening is an individualized decision for women 40 to 49 years of age
- (I) IETRFOA
 - Mammography after 75 years of age
 - Screening with digital breast tomosynthesis
 - Adjunctive screening in women with dense breast tissue and negative screening mammogram

Lung cancer screening¹⁹

(B) Screen annually with low-dose computed tomography for individuals 50 to 80 years of age with a 20-pack-year history who currently smoke or quit within the past 15 years; discontinue screening once a person has not smoked for 15 years or develops a health problem that limits life expectancy

Osteoporosis screening²⁰

- (B) Screen women 65 years and older
- (B) Screen postmenopausal women if increased fracture risk shown with an osteoporosis risk tool (e.g., 8.4% in 10 years by U.S. FRAX tool)
- (I) IETRFOA screening men

continues

Adult Preventive Health Care Schedule: Recommendations from the USPSTF (continued)

Grade A/B Recommendations (with Associated Grade C/D/I Recommendations): (continued)

Abdominal aortic aneurysm screening²¹

- (B) Screen men 65 to 75 years of age who ever smoked (100 or greater lifetime cigarettes) with one-time abdominal aortic aneurysm ultrasonography
- (C) Recommend selective screening of men 65 to 75 years who have never smoked
- (I) IETRFOA women 65 to 75 years of age who ever smoked
- (D) Recommend against routine screening in women 65 to 75 years of age who have never smoked

HIV prevention with PrEP²²

(A) Offer PrEP to persons at high risk of infection. See original text for considerations in patient selection

Primary prevention of breast cancer²³

- (B) Consider medications (such as tamoxifen, raloxifene, or aromatase inhibitors) that reduce risk of breast cancer in women at increased risk though with low risk of adverse effects
- (D) Recommend against routine use if no increased risk

Folic acid supplementation²⁴

(A) 0.4 to 0.8 mg daily for women capable of conceiving

Statins for primary prevention of CVD²⁵

- (B) Recommend low- to moderate-dose statin therapy in patients meeting all three criteria:
 - (1) 40 to 75 years of age
 - (2) Dyslipidemia, diabetes, hypertension, or smoker
 - (3) 10-year CVD risk of 10% or greater
- (C) Consider low- to moderate-dose statin therapy in appropriate candidates meeting the first two criteria but with a 10-year CVD risk of 7.5% to 10%
- (I) IETRFOA initiating statin therapy after 75 years of age for primary prevention

Fall prevention in community-dwelling older adults²⁶

- (B) Recommend exercise interventions for individuals 65 years and older at increased risk of falls
- (C) Recommend multifactorial interventions for appropriate individuals 65 years and older; see Clinical Considerations in original recommendation statement for patient selection
- (D) Recommend against vitamin D supplementation for fall prevention

Counseling to prevent sexually transmitted infection²⁷

(B) Recommend counseling to prevent sexually transmitted infection for adolescents and adults at increased risk

Counseling to promote healthy diet and physical activity²⁸

(B) Recommend that patients with other CVD risk factor(s) who are overweight or obese be offered or referred for intensive behavioral counseling

Counseling for skin cancer prevention²⁹

- (B) Recommend counseling fair-skinned patients six months to 24 years of age about minimizing ultraviolet radiation
- (C) Recommend selectively counseling fair-skinned patients older than 24 years about minimizing exposure to ultraviolet radiation
- (I) IETRFOA counseling adults about skin self-examination

Counseling to promote healthy weight gain in pregnancy³⁰

(B) Offer behavioral counseling interventions to promote health weight gain and to prevent excessive weight gain to all pregnant women

Grade C Recommendations:

Initiation of low-dose aspirin for adults 40 to 59 years of age who have a 10% or greater 10-year CVD risk 31

Physical activity and healthy diet counseling to reduce cardiovascular risk in adults without obesity or known CVD risk factors³²

Prostate cancer screening with prostate-specific antigen testing in men 55 to 69 years of age after shared decision-making³³

Grade D Recommendations:

Bacteriuria (asymptomatic) screening in nonpregnant adults34

Beta carotene or vitamin E supplementation for CVD or cancer risk reduction³⁵

Carotid artery stenosis screening³⁶

CVD screening with resting or exercise electrocardiography in lowrisk patients³⁷

Chronic obstructive pulmonary disease screening with spirometry³⁸

Combined estrogen-progesterone for prevention of chronic conditions or estrogen for the same in patients with hysterectomy³⁹

Genital herpes screening⁴⁰

Initiation of low-dose aspirin for adults 60 years or older³¹

Ovarian cancer screening41

Pancreatic cancer screening⁴²

Prostate cancer screening with prostate-specific antigen testing in men 70 years and older³³

Testicular cancer screening⁴³

Thyroid cancer screening44

Vitamin D (\leq 400 IU) and calcium (\leq 1,000 mg) supplementation daily for primary prevention of fracture in postmenopausal women⁴⁵

Grade | Statements:

Atrial fibrillation screening46

Bladder cancer screening⁴⁷

Celiac disease screening48

CVD screening in patients with nontraditional risk factors⁴⁹

CVD screening with resting or exercise electrocardiography in intermediate- to high-risk patients³⁷

Chronic kidney disease screening50

Cognitive impairment screening in older adults⁵¹

Eating disorders screening52

Gynecologic condition screening with pelvic examination⁵³

Hearing loss screening in older adults⁵⁴

Impaired visual acuity screening in older adults⁵⁵

Multivitamin, single nutrient, or paired nutrients for CVD or cancer risk reduction (beta carotene and vitamin E, as above)³⁵

Obstructive sleep apnea screening⁵⁶

Oral cancer screening57

Peripheral artery disease and CVD risk screening with ankle-brachial index⁵⁸

continues

CHD = coronary heart disease; CVD = cardiovascular disease; FRAX = Fracture Risk Assessment; IETRFOA = insufficient evidence to recommend for or against; PrEP = preexposure prophylaxis; USPSTF = U.S. Preventive Services Task Force.

Adult Preventive Health Care Schedule: Recommendations from the USPSTF (continued)

Primary open-angle glaucoma screening⁵⁹

Primary prevention of fractures with vitamin D and calcium supplementation (alone or combined; dose unspecified) in men or premenopausal women, and in postmenopausal women with daily dosages > 400 IU of vitamin D and > 1,000 mg of calcium⁴⁵

Skin cancer screening⁶⁰

Suicide risk screening⁶¹

Thyroid dysfunction screening⁶²

Vitamin D deficiency screening in community-dwelling nonpregnant adults $^{63}\,$
